

SPORTSMEN'S CORNER

BASKETBALL—

The Ramrods won a nip and tuck game Monday evening at Crescent City against the 20-30 club which took an overtime period to unglue the score. Brookings boys played without benefit of Harold Putnam, their rangy and rugged center, who is usually high-point man. Putnam had sprained his ankle in Friday's practice and has been sorely missed by his team mates. He will be back in the lineup, however, when the Ramrods meet Brookings high school and Crag Lumber Co. this week.

The Ramrod schedule is pretty heavy this week with four games on the agenda. Two were played at Crescent City, Monday and Tuesday, and two games complete the week here. The Ramrods meet Crag Lumber Co. at the local gym tonight. Any bets that the boys won't be ready for rest on Friday?

Along Azalea Row

The word "rugged," by its too-free use, in the past decade, has lost much of its strength, but in its initial meaning, it describes the book, "Our Plundered Planet" to be reviewed at the monthly meeting of Azalea Garden Club today. It also describes another book, "The Road to Survival".

These two books, written from the standpoint of the best and most-carefully sifted findings of scientists, as authentic, as the nuclear physicists whose accumulated knowledge produced the atomic bomb, give us the facts of and what we can perceive of the magnitude of the comparatively new science of conservation. Its cardinal principle stated in the interdependence of the elements—thusly and simply: All the component parts of the machinery of nature are dependent one upon the other. Remove any essential part and the machine breaks down. This is a primary fact and there is no other comparable to it in importance.

That man in his ignorance of the nature of the soil and his dependence on it for his survival, through his self-idolization in his predatory greed (man, one of the "Carnivora"—an ugly word) has pillaged, burned, wasted and destroyed (and is still doing it) the coil and all other things in nature, is the concern of both these books.

Through his plundering of this planet, his earth home, he has brought all life on this earth to the eminent danger point—soils, water, plant and animal life.

Without one of these the earth will die—become as dead as the moon. It is so stated.

In the middle of this plundered planet, man stands indicted as the arch criminal in nature. In no other species of living created things is there found such mass killing of their own species as in man, manifested in his combativeness—his murderous instincts behind all his wars, in history—the ingeniousness of his

mind bent on devising diabolical accelerated machinery for bigger and better killing—this mass killing of his own species—his own kind.

There are but few real pests in nature as stated. Given as a list of "probables" are the rat, the flea, some ants, the bed-bug, and the louse (and without their dainty biological terms). Stated as a fact and with preamble: "Man is the greatest pest—the greatest destroyer in the entire scheme of nature." Which is to say that man, supposedly created in the image and likeness of the Creator and whose avowed purpose in life is to approximate that Image, must now face himself and his awesome record, his own personal "out-of-tuneness" with his Creator and his own relation to, and responsibility toward all other created things.

It seems that in their appraisal of man and his world, the scientists have gotten a better appraisal of themselves. Hitherto, they have been the strange silent men that pursued knowledge for its own sake—giving it out carefully and apologetically to their colleagues, to the esoteric few—or a little here and there, to be interested by lesser minds, not in its entirety—their own gratification, perhaps, in the long technical papers they prepared of their findings, exchanging their discoveries with like scientists in every country.

Though man's destruction and the resultant poor expedience (wars) even this small gratification is taken from them, under the further expediency of "secret information not to be divulged to the enemy."

Now the scientist has taken his own measure and with precise knowledge, he knows where he belongs in this picture. He rises courageously, an angry man. He takes off his mental coat of apology. He is saying to us "I have given more of myself unselfishly, I have out-studied you, I've out-worked you—I out-know you and I have out-sweated you. I am now going to talk to all of you, in your language which is mine, to the end that we all work together to repair our damage, that threatens our very survival.

These are the seeds of the new science of conservation.

Thought for the day—

Sir Isaac Newton who discovered, among the many other things he didn't divulge, the principle of gravity, said: "If a scientist gives out anything but the most cautious statement of his findings, he must become a slave and spend the rest of his life defending it."

"Homemakers"

By ALDENE N. AHO,

HELLO, THERE:

Greetings to all 4-H club members! Congratulations to all 4-H club local leaders on the splendid work you are doing for Curry county youngsters. Although we appreciate you the year around, it is good to have a special week in which to give voice to our appreciation.

Through the efforts of our local leaders, 4-H club members are working together for "better living for a better world" in keeping with their ten 4-H guide posts:

1. Developing talents for greater usefulness.
2. Joining with friends for work, fun and fellowship.
3. Learning to live in a changing world.
4. Choosing a way to earn a living.
5. Producing food and fibre for home and market.
6. Creating better homes for better living.
7. Conserving nature's re-

sources for security and happiness.

8. Building health for a strong America.

9. Sharing responsibilities for community improvement.

10. Serving as citizens in maintaining world peace.

But it's not all work—4-Hers have fun, too. Ask anyone who attended 4-H summer school at Oregon State College last summer. They had fun aplenty! Local club meetings plan recreation into their programs, too.

There are 1,800,000 4-H club members. In addition to project work through which they are learning better living, they sent gifts, valued at more than \$300,000 to those in need across the seas. These gifts included thousands of packages containing food, clothing and equipment of various types. This activity gave them a better understanding of their responsibility in the world of today. So again, congratulations to all 4-H club members and local leaders. May you truly learn "Better Living for a Better World."

SMITH RIVER

Smith River Coffee Shop has changed hands and is under new management. Mr. and Mrs. Claud Taylor and family of Orick have taken over the business formerly under management of Mr. and Mrs. Ralph Stanbrough. New owners are prepared to keep it open seven days a week from 6 a. m. to 10 p. m. and to serve meals at all hours.

Mr. and Mrs. Walter W. Woods are parents of a little daughter, born Mar 4, at Seaside Hospital. The young miss weighed 8 lbs. and has been named Katherine Mary after both grandmothers. Grandparents are Mr. and Mrs. Kenneth Layman and W. Woods of San Francisco. Mrs. Woods is the former Katherine Layman.

Clarence Hight received a message Monday saying his sister Mrs. James McGrew of Doris, Calif., had fallen and injured herself, and was confined to Siskiyou County Hospital at Yreka.

Ed Hight has been released from Seaside hospital where he spent several days under treatment for an attack of flu and threatened pneumonia.

Mrs. Lester Ulrich left Sunday morning by Southwest Airways for Walnut Creek where she will assist with the care of her little grandson and daughter, Mrs. Louis Broman who have been released from the hospital and have returned home.

The Ladies Society of Methodist church is holding a dessert luncheon Thursday afternoon at the community hall at 1:30. A program has been arranged. All are invited.

Remember the fashion show.
