Plywood Corporation, individual line services will be available with the completion of the installation of the new central office equipment which is now being installed. Incidentally, with the installation of this equipment all telephone instruments will be changed to the harmonic ringing type. With this type of service 2- and 4-party line users only hear their own bell and subscribers on 10-part suburban lines only hear two of the 10-party rings. TWX service which was requested by Brookings Plywood

Corporation in its letter of April 19, 1951, to be available in January, will be available at that time.

The recent severe storm which swept through the coastal area did considerable damage to our plant and all efforts are being made to complete the repairs to that damage. This has caused unavoidable impairment to service and interrupted long distance service completely in many instances. The storm was not only felt in the coastal area but also as far away as Willamette Valley

points. In order to repair the damage we sent in men, trucks, and materials from other parts of the system not affected by the storm in order to expedite repairs in the Oregon coastal area.

Every possible effort is being made by us to complete these

projects as early as possible. We want at all times high grade telephone service at Brookings and improve long distance calling service. We will direct our efforts to that end.—Ray Dalton, Vice-president and general manager. Everett, Wash.
