Some people believe that we can continue adding new telephones merely by attaching telephone instruments to existing wires. Unfortunately, telephone expansion is not that simple.

Almost all of our exchanges are operating to full capacity, and to add more telephone subscribers to our system we must expand our entire plant. In many cases we must enlarge or build new buildings. We must add switching equipment, carriers, poles, cables and many other types of complex telephone equipment.

Increased material costs, increased wage rates, the necessity to greatly enlarge our plant facilities and the higher operating costs of an expanded system have forced us to request increases in telephone rates—the first increase since 1946.

New telephones and the capital to provide them must come from the investing public, and our earnings must be enough to make this investment possible. The increases we are requesting are, however, far below the price raises on groceries, clothing and most other prices. Your telephone service is still one of other prices since 1946. Your telephone service is still one of today's best values.
