

# Along Azalea Row

By Mrs. E. F. Rapraeger

The February meeting of the Azalea Garden Club was held at the Grange hall on Thursday, Feb. 12. The dessert luncheon which preceded the meeting was served by Mesdames William Fisher, Virgil Goldsberry, Clara McIndoe and Glen Hurst.

Mrs. Curzon McKenzie and Mrs. Lee Rice entertained the members and their guests with two attractive duets entitled "Lassie O' Mine" and "Can't You Hear Me Calling?" accompanied

by Mr. McKenzie at the piano. Mrs. Louis Peterson gave an interesting short talk on the Chickadee and its habits. The Chickadee belongs to the Titmouse family and gets its name from its cheery call which can be heard even through the coldest, most blustery and wettest days. In the autumn and winter the Chickadee is often the center of a little host of mixed species of Warblers, Vireos, Kinglets, Nuthatches, and occasional Downy Woodpecker or Brown Creeper, and its notes seem to form a rallying cry that keeps them together. The Brookings-Harbor abounds in many species of beautiful birds throughout the year, and each month one of these birds is discussed briefly by a Garden Club member. Mrs. Albert Joy, quite a bird expert herself, is the chairman of this program and under her guidance members are becoming well acquainted with the many beautiful birds which inhabit this coastal area. Each month members compete for the longest list of birds seen during the month, and now rivalry is keen for the first glimpse of the swallow. No cash prize is offered, for the honor of seeing the first forerunner of spring is reward enough.

Mrs. Arthur Knox talked briefly of Tuberos Begonias, listing the different kinds and gave the members some useful information on methods of growth. Mrs. Knox grew many kinds of Tuberos Begonias when she lived in Salem and therefore able to speak with some authority on the subject. Members are reminded to get their bulbs and plants ready for the plant sale booth for the library carnival. Be sure plants are well rooted and labeled. Marjory Goldsberry is plant sale chairman.

Mrs. Warren Smith, conservation chairman, was unable to give her scheduled talk, entitled "Lest We Forget," so Mrs. Ruth Bathiany kindly stepped into the breach and illustrated her interpretation of the meaning of conservation by distributing a large box full of beautiful camellia blooms which she had conserved from her prize bushes.

"To share one's blooms with neighbors and friends instead of leaving them to wither on the plant, that is my idea of conservation," explained Mrs. Bathiany. With this sentiment we heartily concur.

# Oregon Big Game Fares Well

Oregon game herds are faring exceptionally well this winter, according to state-wide reports from game agents.

Weather conditions remain moderate throughout Oregon and warm January rain removed snow from the lower elevations, permitting a widespread distribution of game herds. Many deer are ranging at 6,000 foot levels in summer ranges, and most big game herds are in good flesh.

Bob Mace, game commission big game specialist, forecasts a high survival of last spring's fawn crop which should insure good deer hunting next fall.

Typical of comments in January game reports are those of Game Agent Ted Laughlin in Willowa county. "Game in all areas is well scattered and up to 6,000 feet elevation. All game I have seen is in excellent condition. Grass has started to green up lower down so if there is a severe storm deer and elk will have a good feed to drop down to."

Game Agent Glen Ward reports elk on their main summer range near Tupper Guard Station in the Blue mountains, and Game Agent Paul Ebert notes that, "Hood River and Wasco county deer ranges are in the best shape ever observed, with snow receding to the foothills of the summer ranges." From the Ochoco and Deschutes areas Game Agent Paul Boon writes of the same favorable conditions.

In southeastern Oregon Ellis Mason, game agent for the Harney district, observed that, "the age class in bucks has changed considerably as a direct result of last year's heavy winter loss among young deer." This winter Mason's buck composition count shows 41 per cent adult four-point bucks compared with only 26 per cent last winter.

Composition of deer herds in Harney county is 12 per cent bucks, 48 per cent does, and 40 per cent fawns. Mason notes no abnormal deer losses, and, because the deer are in such good shape, he expects light losses even if the weather turns severe.

## Warm Sunny February Days

The Chamber of Commerce would do well to advertise "to the skies" the type of weather southwestern Oregon is experiencing this week.

Sunny Sunday drove many people to the beach in the afternoon. It was not a blue Monday for homemakers who filled clotheslines to catch up on accumulated laundry. It definitely was a good drying day with a temperature of 63.9 degrees in the afternoon.

Tuesday the maximum temperature was 66 degrees. It is no wonder the minds of people was turned toward gardening and children could not keep their thoughts on book learning.

Roads are drying up fast which definitely is a boost to the morals of workmen who depend upon road conditions.

January showered us with 23.64 inches rainfall. Along Azalea Row column this week has an interesting comparison of the amount of precipitation for different years.

## Mildew Discolors House Paint

Mildew—not dirt—is the major cause of discolored paint on two out of every three homes, the Nuodex Products company disclosed here.

Taking samples of more than 600 homes throughout the country and analyzing them by new "hamlet" techniques, the company found that 68 per cent of the discolored looking houses were the victims of mildew.

Where mildew is the major factor in paint discoloration, it seldom can be removed by washing, it was found. However, there are market paints protected with a patented fungicide that combat mildew for a considerably longer period.

The new technique involved in the study enable paint experts to differentiate between dirt and the presence of fungi which spells mildew. A special type of microscope, long used in studying the surfaces of metals, is used for the first time in diagnosing the presence of mildew in paints.
