

MULLET

By E. LAURENCE PALMER

THE FISH figured here is the Striped Mullet which is a close relative of the White Mullet, the Fan-tail Mullet and the Brazilian Mullet. Of these the Fan-tail and Brazilian Mullet may be considered more southern than the Striped and the White. The White Mullet is rare north of New York though it has been taken as far as Maine.

The Striped Mullet has the rep-

utation in the New York latitude of hibernating during the winter months. We do not presume to pass judgment on this statement. The southern limit of the range in the Atlantic is Brazil with the greatest concentration off Florida and the Gulf of Mexico.

tract of the mud eaters.

Mulletts are of considerable food value for man and provide one of the most popular and successful baits for the larger game fishes of the seas. The size of the mullet used depends in part on the fish sought by the angler. Mulletts are commonly cut up for use as bait.

So valuable is this species that extensive studies are being made to assure that the supply continues. The National Wildlife Federation has sponsored many studies designed to protect different forms of wildlife.
