

Around the World in 91 Hours—Czech Huddle

1—The big twin-engine monoplane in which Howard Hughes, millionaire pilot, made the fastest trip ever recorded around the world. Only 3 days, 19 hours and 17 minutes after he took off from New York with a crew of four Hughes returned to his starting place. 2—Dr. Eduard Benes, left, president of Czechoslovakia, talks over European conditions with Dr. Milan Hodza, prime minister. 3—Howard Hughes, sensational young aviator who headed record-breaking world flight.

Pony Sees Sun First Time In 15 Years

Pardoe, a 19-year-old pony, is shown being petted by a young miner upon coming to the surface of an English coal mine after living underground for 15 years. The pit ponies are a unique breed, being specially produced on Welsh farms by crossing farm shires with Welsh mountain ponies so as to get power with small build.

ACE PLANE BUILDER

Milton Huguélet, sixteen, of Chicago, who was awarded the grand championship of the National Model Airplane meet in Detroit, Mich., recently, from among 700 entrants. He also won the Bloomingdale trophy for the best time made in the light cabin model which stayed in the air 13 minutes and 50 seconds. Milton is shown with both trophies.

Seeks Trade Between India and U. S.

Singh Malik Takes Post As Commissioner

Hardit Singh Malik, I. C. S., O. B. E., newly appointed by the government of India as its trade commissioner for North America, is shown as he arrived in New York. The commissionership has been established in the United States in order to increase trade relationships between the two countries. In addition to promoting increased trade between the United States and India, the new commissioner will seek an augmented foreign trade between India and the Dominion of Canada, as well as Mexico.

Japs Launch Fight on Cholera Epidemic

As an aftermath of battles, floods and famine, a cholera epidemic is reported sweeping the war-torn areas of China. Strict orders have been issued from Jap army headquarters at Hongchew and Yangtzepoo requiring inoculation against the dread disease. Here a sentry examines a certificate while in the background, Chinese await the free cholera shots which are being given to all who have no certificates.

FARM TOPICS

CAN NOW MAKE HAY IN RAINY WEATHER

Modern Methods Are Used In Making Green Silage.

By Clarence H. Parsons, Superintendent Massachusetts State College Farm, WNU Service.

How to make hay in rainy weather is a trick that has been solved on many dairy farms during the past few years. Modern methods of making green grass silage have done away with the need for long curing in the field, and the resulting product is high in valuable food elements and appetizing to the cows.

Dairymen have been experimenting with this new method of making grass and clover silage for several years and the state college has also given it extensive trials. Up to the present time, corn has been the standard silage crop of the Northeast, but on many farms grass and clover are easier to grow, the yields are as high as those of silage corn, and protein content of the resulting silage is higher than that of corn silage.

Grasses and clover are low in sugar content and for this reason it was difficult to bring about desirable fermentation in the silo until investigators found that the addition of cheap molasses brought about this result. The molasses is added to the grass and clover as it is fed into the cutter. On the college farm 40 to 60 pounds of molasses are added to each ton of grass. Where alfalfa is put up about 75 pounds of molasses to the ton is used. Silage put up in this manner last year came out of the silo sweet and in excellent condition, and the herd responded favorably to it.

Grass silage is best when the crop is cut in a young and tender stage. If it becomes mature and woody, it makes poor silage.

Feed Hoppers Are Urged For the Young Pullets

Healthy growing pullets require large quantities of feed, and the best growth can be made only when the birds have free and continued access to the feed. For this reason, advises a writer in the Montreal Herald, we recommend at least three 5-foot mash hoppers 4 to 5 inches deep, feeding from both sides, for each 100 birds, during the early part of the summer. These hoppers should be filled daily with fresh mash, and should never stand empty. On the other hand, if they are filled too full there may be a waste of mash. To overcome this difficulty a strip of lath may be nailed along the top of the outer edge, so as to form a lip and prevent spilling.

To prevent soiling the feed, a revolving pole or reel of laths is fastened just above the level of the feed and secured to the raised ends of the hopper. For outdoor feeding, much labor can be saved by using large weatherproof, self-feeding hoppers. These are built with a solid roof or lid covered with tarpaper, which extends out beyond the feed trough on each side of the reservoir, and thus protects it from rain. These feeders may hold 100 to 200 pounds of mash, and thus require little attention in filling. A pullet will eat about 20 to 25 pounds of feed from the age of six weeks up to maturity.

Gasoline, Kerosene Dangers

Gasoline and kerosene fires cause a loss of approximately \$6,000,000 a year on the farms of the United States, according to the bureau of chemistry and soils of the United States Department of Agriculture. They are sixth among the causes of farm fires and are responsible for 5 to 7 per cent of the total loss each year. Ignorance and disregard of the explosion hazard of gasoline and kerosene are responsible for most of these fires, says a bulletin. The vapor of gasoline is so highly explosive that it has been called "liquid dynamite." It is dangerous to use gasoline for dry cleaning in the home. It may explode from even a tiny spark of static electricity produced by rubbing the clothing being cleaned. Although not so inflammable as gasoline, kerosene also gives off vapors which may be easily ignited. Neither should be used to start a fire in the house.

Farm and Feed Lot

Matured sugar cane contains 18 per cent sugar.

In hot weather the hens need plenty of water, often renewed.
