

Natural gas in Mist, logging cutbacks and demolished landmark in 1980

NATURAL GAS—The sixth successful natural gas well in the Mist field went on line the week of June, 1980. This well Columbia County's No. 33-3, continues to be one of the best producing fields located to date.

LANDMARK—On Monday, Nov. 24, 1980, the old GTE building was demolished to make room for a parking lot.

CUTBACKS—As these idle log trucks attest, personnel and manhour reductions by first Longview Fibre Co., then by Crown Zellerbach, in October, forced large numbers of local loggers into an unwanted winter vacation.

HILLSBORO PLUMBING

We will now be serving the Vernonia area every Wednesday with complete plumbing and service
