WASHINGTON WINS BIG GAME

Oregon's Brightest Hopes Dashed by Defeat at the Hands of the Northerners on Saturday

For the third time in the history of the world, a rival team won victory from Oregon on Kincaid Field, when the splendid eleven from the University of Washington, in seventy minutes of play, crossed three times the Oregon goal line. The score, all of which came in the second half, is a fair indication of the relative strength of the teams. Oregon's men were at their best and played a wonderful game, fighting fiercely and stubbornly until the whistle blew. All agree that the star of the contest was Louis Pinkham, Oregon's left tackle. Pitted against the redoubtable Eakin, Pinkham, flanked by Dodson and McIntire, was in every play on either side of the line and repeatedly tackled the Washington backs behind the line of scrimmage. When he limped from the field late in the second half, he was accorded the greatest round of applause ever bestowed upon an Oregon player. Clarke and Eakin divided honors in punting, but Oregon's occasional fumbling of punts gave the advantage to Washington in this department of the game. Newton, Hickson, Chandler, Means and Main, the freshmen on the lemon-yellow team amply justified their selection by Coach Forbes, the last two especially playing gilt-edged ball. Moulten was a host in himself at tackle but did not have a single chance at a place-kick. The Seattle men kept the ball in Oregon's territory most of the game and often made yardage, which Oregon seldom attempted to do. The very best of spirit prevailed between players and between rooters.

Story of the Game.

Clarke kicked off 45 yards to Westover, who came back to the 30-yard line before brought down by Main. Line bucks and end runs netted the visitors 34 yards, but Pinkham stopped them up and Eakin kicked over the line. Clarke kicked out. Before the

Washington men could make yardage, Dodson got the ball for Oregon on a fumble. Clarke immediately punted. Washington put the ball in play from a fair catch, making 16 yards in two downs. Pinkham and Dodson foiled two attempted end runs, Eakin kicked and Chandler went down without advancing. Clarke, about to be tackled on a fake play, passed the ball forward into the arms of an opposing

player. The northerners tried a place kick without success. Unable to overcome a 15-yard penalty, Coyle kicked, Clarke returning the kick on first down and Oregon suffering a penalty of 15 yards for interfering with a free catch. It was Oregon's ball on downs. A double interchange of punts gave

BUILDING NEAR COMPLETION

Civil Engineering Department Will Move Into new Home During Christmas Holidays

The new building, authorized by the Board of Regents and being built on the property recently acquired by the University, is now nearing completion. The work is being done under the efficient supervision of Mr. W. H. Alexander, who is under the direct control of the Steward of the University. Although a frame building, it is being constructed in a very substantial manner, and, while the architectural features are not elaborate, the outlines of the building are simple and pleasing, and the interior arrangement affords every convenience. The building is designed to accommodate all of the Civil Engineering department with several lecture rooms for relieving the congestion in other departments.

On the first floor are four commodious and well lighted lecture rooms and one room which is to be fitted up for a cement testing laboratory. Adjoining the stairway is a good sized room to be set aside for keeping the surveying instruments and accessories, the need for which has been sorely felt by the surveying instructors hitherto.

The second floor of the building is specially designed for the accommodation of the classes in drafting. One large room about forty feet square provides for the large and growing classes in freshman and sophomore drafting, while another room provides for other drafting classes. A room in the southwest corner will be fitted up with a large sink and printing frames for the blue printing operations.

A feature of the lighting of the rooms upstairs is the use of regular prism glass in the upper sashes of the windows on the north, this affording as much light to those farthest from the windows, as to those close by. All other windows are provided with skylight prism glass in the upper sashes which will diffuse the light and add greatly to the efficiency of the windows.
