

What May Happen This Year.

[Here are Spangler's prophecies for 1906:]

Rebellion in Spain.

The dissolution of Russia.

The overthrow of Turkey.

Great disturbances all over Europe.

Great loss of life at sea by storms.

A protracted race-war in the south.

Earthquakes in all parts of the world.

The assassination of the Czar of Russia.

A destructive eruption of Mount Vesuvius.

The assassination of the Sultan of Turkey.

Volcanic eruptions in all parts of the world.

Destructive spring floods in the United States.

The activity of Mount Pelee and Popocatepetl.

Destruction of two western cities by cyclones.

The prevention of three wars by President Roosevelt.

Destructive earthquakes in California and the Philippines.

The eruption of many volcanoes now supposed to be extinct.

That God will wreak terrible vengeance upon the Russians for the massacre of the Jews.

That the United States will continue as a world power and the leader of other nations.

Spangler says further that the summer of 1906 will be hot and sultry through the temperate zone, with extensive death rate.

That Pennsylvania is to have an administration of the people and that discoveries of corruption will be discovered which will drive some of the guilty to suicide.

That Christ will make his spirit felt among the peoples of the United States and England, in which countries there are to be fervent religions and potent political movements which are to overcome in a great degree the present spirit of graft and commercialism.

Nature

If you study you will find it a beauty, that enlightens the hearts and homes of many people throughout the world. But yet there are people who do not care for natural things because they do not realize their beauties. We see them tramp over beautiful flowers that nature has put beneath their feet and pluck them when really they do not need them. I think that people who do not care for the flowers ought not to tramp over them, for they have life the same as we have and were created by the same hand that we were and that they were created for the same purpose. We may take the flower and study it. We may first take its blossoms and study them, then its leaves, then its roots.

Then we can teach others what we have found. Others might copy the beautiful scenes which nature produces and make the finest pictures which may bring him a great fortune.

The sick enjoys nothing better than the beautiful flowers with their sweet odor that fills the air. Wherever we may go in spring, in summer or in fall, but in winter we have nothing but the tall trees that look down upon us waving their green limbs to and fro. Four seasons in a year and in each season we have different weathers and climates and yet nature is always in her green dress here.

—J. S., Eighth Grade.
