

INDUSTRIAL NOTES

Ignatius Bart is starting on set of hack harness.

Wm. Burke finished a set of breeching this week.

Louise Murray is sewing this week for Mrs. Thiesz.

John Boyce is just starting on his third set of work harness.

The blacksmiths are putting a new gutter on their shop.

Martin Sampson made a pair of shafts for the sloop wagon last Friday.

Maxime Barnaby is just completing his first set of double driving harness.

The Superintendent's carriage is now under repairs at the blacksmith shop.

James Minesinger who has been working at plumbing for the past few months, is in the engineering department again.

Mr. Westley is plowing the onion ground down at the lake, it had been too soft to plow before.

A number of our girls are excellent dressmakers and will sew for the employes at extremely reasonable rates.

Frank Rosenberg and Robert Gregory are firing under the school building this week.

Joe Lane is now working in the power house after working in the plumber shop for some time.

The carpenters are doing general repair work. They are fixing the gymnasium windows and putting in screens at different places about the grounds.

Ben Wilson has just completed a set of single driving harness and will at once start on another set.

The painters have finished painting the Gymnasium roof and are now painting the roof of the drier.

The sewing room girls sent out more dresses last week than they did for a long time there were twenty one.

The firemen say that the G. O. P. Line is very rough and takes a great deal of push to get the train to going on it.

As the blacksmiths are out of coal you can find them any place around the grounds working on one thing or another.

Frank Sorahan made a hammer recently that well deserves mentioning as it was very well made and well tempered. We doubt if it can be beat.

The blacksmith shop is beginning to look fine and in going through the different departments you will find that there is not one that excels in neatness.

The carpenter boys have been repairing the Gymnasium for a month, but now that the good weather is here to stay, we hope it will soon be in first-class condition.

The girls who are cooking for the relay team are getting excellent practice. We know they will all be good cooks. Such practical work is better than theoretical. If you want to learn how to cook--cook.

The sewing room girls are making the new gingham dresses, and making the first company of the small girls' blue percale dresses. We are getting along faster with the dresses this year than last.—L. P.
