

## LOCALS

Mrs. F. W. Carson of Toledo was visiting Miss Bender over Sunday.

Mr. Riddell of Bay Center, Wn., was visiting his children here during the week.

Rose Festival visitors from the school were Mrs. Campbell, Miss Faris, Miss Grear, Miss Steponeck and Mr. Larsen.

We are all glad to hear that Miss Boyd, who has been suffering from a severe case of pneumonia, is improving and that her temperature is normal.

The office force were made happy by the securing of a Thesaurus dictionary of the English language which will greatly help them to think of things when their minds refuse to work.

The first news of the safe arrival of our friends to Alaska was the following received by Mrs. Chalcraft: "At Sea (by United Wireless) S. S. Portland, June 11, 3 a. m. arrived Katalla; all well."—Seattle Post-Intelligencer.

New running track and hay carriers have been installed in both the dairy and horse barns to replace those which did not give satisfaction. Mr. Swartz predicts that Chemawa's hay crop will be harvested in about half the time owing to the improvement.

A ten-horse power General Electric Motor has been ordered for use at the barns and the farm. The motor will be installed on a portable frame and will be used for our ensilage cutting; for the unloading of our hay; the cutting of our feed and the clearing of our land. With the motor will be installed an up-to-date hoist, which also has been secured.

C. E. Frye received an appointment as wheelwright in the Quartermaster's Department at the Vancouver Barracks in Washington June 1, and after looking over the situation he decided to remain in Chemawa. While there is difference in salary yet it would not justify a change; and then he feels that he can do more good to the government here than at Vancouver.

Minnie and Maggie Pambrun, former pupils of the school, paid Chemawa a visit and were delighted to again visit Chemawa and were surprised at the many improvements which they found here. Maggie is married and has two children. Her husband's name is Chas. Wilson, also a former pupil of Chemawa. They have two charming children aged two and four years. Mr. Wilson is a rancher near Adams, Ore.

The engineering department are busy this week installing a 60-K. W. dynamo which has been secured. This is being installed by the engineers and in the installation, the apprentices will get practical instruction which will be very helpful to them. Chemawa's engineering department now has two engines, 82-H. P. and 40-H. P.; three dynamos of 60-K. W., 30-K. W. and 25 K. W. capacity, and one 10 H. P. motor, besides four-7 H. P. motors; one Cook deep well pump; 2 large Worthington pumps; one wind mill; laundry machinery and cooking utensils. This keeps the large force of engineer apprentices busy day and night in supplying steam heating, light, power for industrial departments, printing office and laundry, water for the institution, steam for the laundry and cooking and hot water for the institution, gives the engineer apprentices unprecedented advantages for improving themselves in engineering.
