Most persons would be surprised to learn that one-dollar bills are worth almost their weight in gold, says Harper's Weekly. A \$20 gold piece weighs 540 grains. Twenty-seven crisp, new one-dollar bills, fresh from the bureau of engraving and printing, weigh the same as the gold piece. Bills that have been in use have been tested and it has been found that it took but 28 of them to balance the gold piece. It follows, of course, that the used bills gather an accumulation of various matter, in passing from hand to hand, that causes them to take on additional weight equal to about that of one new bill.
