SMELLS CARRIED BY CURRENTS

Experiments Have Been Made to Show the Time Taken for Varlous Scents to Travel.

The rapid propagation of smells no-

ticed in the open air appears due en-

tirely to currents, since in small tubes, where currents do not exist, the rate is found to be very small. Experiments along this line were first undertaken in England, and additional data have been reported in this country. With ammonia diffusing through a tube a meter and a half long, more than two hours elapsed before the smell could be detected at the other end of the tube. Using different lengths of tubing, it was found that

the time required for the diffusion of the smell was roughly proportioned to the square of the length. Ammonia and hydrogen sulphide were used for these experiments.

when the sense of smell was used Sir Philip Sidney.

for a detector. The rate of propagation of the smell of ammonia was not markedly different when this had to pass along the same tube either horizontally or vertically downward. With camphor, however, while the rates horizontally and downward were about the same, the speed upward was about twice as great. The smell given to fron and brass by rubbing these with the fingers was also tried, but gave no definite results.

The Initial Consideration. Lady-I want to sue my husband for

Lawyer-What are your charges? Lady-What are yours first?-Boson Evening Transcript.

I know not whether to marvel more, The presence of ammonia could be either that he in that misty time could detected chemically at a point in a see so clearly, or that we, in this clear tube after about the same time ar, age, walk so stumblingly after him .-

Find Defects in Most Children

University of Iowa Physicians Give Results of Free Clinical Examinations.

SEEK TO HELP THE SUBNORMAL

Over 90 Per Cent of Defects Found Declared to Be Totally or Partially Correctable-Malnutrition Is Common.

Don't you think the kiddies ought to be given every chance to develop into worth-while citizens? What do you think of this campaign?

Iowa City, Ia.-An average of one physical defect for each of 956 Iowa children examined since September 25 has been found by Dr. John W. Prentice and Dr. Florence W. Johnston, University of Iowa physicians in the division of maternity and infant hygiene, who have been conducting free, clinical examinations in various parts of the state. Their work, however, has been aimed at the observation and suggested treatment of the physically subnormal rather than the normal child.

Over 90 per cent of the defects found were declared to be totally or partially correctable. The percentage of possible corrections decreases with the increasing age of the child. Out of 956 children examined 952

defects were found. The defects multiply with the age of the child. It has een Doctor Prentice's observation that rural children have as many physical defects as do city children. Malnutrition is found as often among

farm children as among city children. Several reasons were ascribed to this; among them lack of variety in diet and defective teeth. The most frequent defects among rural children were found to be mainutrition, de cayed teeth, enlarged adenoids and eularged, diseased tonsils.

Need Variety in Food.

"Children need a variety of food elements as do livestock," said Doctor Prentice, referring to the well-balanced diet for farm animals that experts have prepared. "The rural children seem to get food in sufficient quantity but not the variety or balanced diet that enables all tissues of the body to develop properly. In other words, they live on a 'one-sided' diet. Children with bad teeth fail to masticate and digest their food well and they absorb and swallow harmful poisons that come from the decayed teeth."

Children examined at the clinics are scheduled in advance if possible. Their histories are taken, they are examined, a chart of their physical state is made. a summary drawn and treatments recommended for defects. This record is kept by the county or school nurse with the name of the family physician. A copy of this record is given the parents and they are instructed to take the child along with the record to the family physician.

About 50 per cent of the cases in communities where clinics have been held have reported to the family physicians as instructed, according to reports of nurses and physicians. It is believed this proportion will be greatly increased as the work advances.

Gives Advice on Diet.

In order to reach the children clinics are held in various towns and cities under the auspices of local physicians and county and school nurses. Doctor Prentice examines the children and Doctor Johnston acts as adviser to the mothers on questions of child diet prenatal and postpartum care. The university physicians are trying to make assets instead of liabilities out of the subnormal children of Iowa by pointing out possible corrective meas-

ures. Results have indicated that the money, time and effort have been well expended, report division officials. "The success of this great work," said Doctor Prentice, "has been made possible by the splendid co-operation of the doctors and county and school nurses in the various communities

where clinics have been held.

"During recent years the general health and physical condition of our city children have been greatly improved by the work of infant welfare stations, children's clinics, school clinics and many other such organizations. Likewise the maternity clinics have done much for mother and babe. And now we have the same opportunities brought to our rural communities through the work of the division of maternity and infant hygiene of the University of Iowa which is carrying out the provisions of the Sheppard Towner law in Iowa. We need only to importance of this work,"

Sheds New Light on Egyptology

Unearthing of Royal Tomb Greatest Archaeological Discovery of Modern Times.

SEPULCHERS CUT IN HILLS

Tomb of Tutankhamen, 1350 B. C. Not Only Yields Vast Treasures, but is Expected to Reveal Historical Lore.

London.-That the recent unearthing of a royal tomb near Luxor is the greatest archaeological discovery in Egypt in modern times already is certain. How great, in the light which it throws on the vanished civilization that has made the wisdom of Egypt proverbial down all the ages, the discovery may prove to be-this remains for the secret of the still unopened inner chamber to reveal. The story of the discovery, made

by the earl of Carnarvon, whose wealth has enabled him to devote himself to the costly hobby of Egyptology, and Howard Carter, perhaps the finest living archaeological draughtsman, reads like a romance The valley of the tombs of the kings, where the find was made, is a desert ravine lying behind the barren cliffs and hills, which form the mighty walls of the Nile valley on the western bank of the river, some 450 miles

Fight Over Eight Cents Ends in Murder Charge

A quarrel over 8 cents resulted in the death of Henry A. Smith, filty-two years old, at the hands of Hiram Denton, both of Clay county, Tennessee. Denton presented a bill to Smith for \$1.88, but the latter insisted that he would not pay more than \$1.80. Smith is said to have drawn a knife and Denton is charged with having killed him with a blow from a club.

But for more than a generation past
Mr. Carter's faith that tourists in
Thebes were stepping over priceless
treasures in the bowels of the earth
has not faltered, despite all that is
known of the past rifling of the famous site. The beginning of the story
of the discovery goes back 33 years,
when he began searching the "heban" necropolis for a key to ancient Egypt. In that period he found a number of minor prizes, but since Lord Canarvon joined forces with him 17 years ago the discovery of the Hyksos tablet was their greatest reward-up to the pres-

Recently, after four days' work in the heart of the small sacred basin he and his party unearthed a step. Continued digging resulted in the excavation of a stairway which led right beneath the tomb of Rameses IX, an inimportant king, who lived some 3,000 years ago. At its foot was a door inscribed with the protocol of as the most sinister ghost of St. Steanother Pharaoh, Tutankhamen, one phens is the one called after Big Ben. of the most important kings of Egypt. It was the one remaining tomb which there had been any hope of finding in the valley of the tombs of that on the day following each of its
