

**WEST STAYTON**

The O. Lacy family were guests at the Tegen home.

Mr. Royse motored to Portland, Monday, with Mr. Nipple.

Mrs. Frank Williams is visiting at the home of Mrs. T. Y. McClellan.

Mr. and Mrs. Chamberlin and Mrs. Elsie Bone went to Salem, Tuesday.

Mr. and Mrs. Bone spent Sunday at North Santiam with the Spois family.

Mr. and Mrs. B. H. Chamberlin and small son and Mrs. Bone were in Salem, Tuesday.

Mrs. Belden and sons were visiting near Portland last week, returning home Sunday.

Mr. and Mrs. J. D. Hooker of Medford, Oregon, were visiting Mr. and Mrs. W. O. Royse over the week-end.

Mr. and Mrs. J. W. Nipple and W. O. Royse motored to Portland, Tuesday morning, returning Wednesday afternoon.

The Community Club held its regular meeting at the hall Tuesday evening. The program was carried out as a radio program with Amos 'n' Andy, the Wranglers and all the other favorites. A large crowd enjoyed the evening.

Guests at the B. H. Chamberlin home Sunday were Mrs. Belle Tripp and stepson, Andy, of Mt. Pleasant, Mr. and Mrs. Welch of Macleay, Mr. Seitzinger and Mr. and Mrs. O'Brien of Mill City.

The Birthday Club met at the home of Mrs. Fred Dickman, Wednesday, April 1. As this was all fool's day a little fun was expected. After a pleasant afternoon spent in visiting and a short business session the hostess served delicious angel food cake iced so nicely and decorated with walnut meats but when opened were found to contain some mysterious flavoring and small bits of cotton batting. Owing to the rainy weather there were

not as many out as usual. Those attending were Mesdames Fred Comstock, Royse, Mankel, Gilbert, Hand, Stewart, Chamberlin, Woolsley, Allen, Peggie Comstock and the hostess, Mrs. Dickman. Mrs. Lacy and Miss Paul Comstock, were guests of the club. The next meeting will be April 15 at Mrs. Arthur Forrests.

**MILK PRODUCTION MOST IMPORTANT**

**Poor Economy to Substitute Feed for Shelter.**

Feed given the dairy cow should be used for milk production and body maintenance rather than as a substitute for proper housing.

"When cows are unduly exposed to bad weather, a large part of their ration is used to keep their bodies warm, leaving only a small portion for milk production," asserts John A. Arey, dairy extension specialist at the North Carolina State college. "Every effort should be made to keep the cows comfortable during the disagreeable periods. If this is not done, profits will be reduced. It is poor economy to substitute feed for shelter at any time."

"E. Arey believes the cow stall should be well lighted, nicely bedded and properly ventilated but free from air currents. He says he has seen many cow barns and sheds in the state of such poor construction that they afford little protection against the cold winter wind. The sides of the barn or shelter should be made tight with the air being admitted through properly located windows.

The practice also of requiring cows to wade through mud and ice to secure drinking water is expensive. This kind of exposure chills the cow's body and prevents her from drinking the amount of water needed for good milk production. A cow weighing from 800 to 900 pounds and producing about 30 pounds of milk a day needs from 80 to 90 pounds of water each day. She will not drink this amount unless it is convenient and of medium temperature, says Mr. Arey.

**Practical Dairyman Is Admirer of Modern Barn**

The modern dairy barn is as far removed almost from the old cow stable

in use a third of a century ago as is mechanical power from that furnished by a yoke of oxen in pioneer days. A well-ventilated, well lighted barn equipped with a concrete floor, adjustable stalls that can easily be kept clean and in strictly sanitary condition, truly is an inspiration to the practical dairyman. With proper ventilation, not only can the foul air be removed, but also the excess moisture that used to accumulate in the old stables. This means better herd health, and more economical use of feed by the cows. Plenty of sunshine and fresh, pure air are two of the most important factors not only for the health of the cow, but also for the conversion by her of feed into milk and butterfat.

**Colostrum Is Helpful to Newborn Calves**

A newborn calf should always be given the opportunity to suck its dam at least once so as to get the colostrum which nature has especially prepared for it. This colostrum is laxative in character and also contains some stimulating products which help to start the digestive system into activity. If for any reason it is impossible to give the colostrum to the calf, it should be given one ounce of castor oil shortly after birth and before it is given any food. After that the calf may be given milk from any cow if the mother's milk is not available.

**Large Newspaper Collection**

What is said to be the largest collection of newspapers in the world has been opened to the public in a newspaper museum at Aix-la-Chapelle, Germany. Among its collection of 150,000 newspapers are curiosities from all over the world, including an Eskimo paper from the middle of last century.

**Hebrew Money**

The monetary system of the Hebrews was based upon the Babylonian system of weights. The ratio of the value of gold to silver was 1:13 1-3 and prevailed over all western Asia.

**Gigantic Structure**

Herodotus estimated that 100,000 men were engaged for 20 years in building the Great pyramid.
