This Coffee Pot For \$1.00
Only One To Each Family

Most people boil coffee—this is wrong. It is even dangerous, injurious to the health. This causes headaches, nervousness, etc., so numerous among coffee drinkers. Good, pure coffee, properly brewed, will not affect you that way.

When you **BOIL COFFEE** you boil out of the grounds tannin—this becomes **tannic acid**—it gives coffee a bitter, nasty taste. You can't avoid this taste when you boil coffee in an ordinary granite or tin coffee pot.

Don't use the old fashioned boiling coffee pot—throw it away—don't endanger your health. Any doctor will tell you tannic acid is bad—that's what they use to tan hides, leather, etc. Don't tan the walls of your stomach like you would toughen and harden a piece of leather—ask your family physician—he will tell you what tannic acid is.

Call at our store—see this **ALUMINUM COFFEE MAKER**. Buy one one pound of our coffee—and get one for \$1.00—you won't part with it after you try it once. It will be worth thousands of dollars to you later perhaps, in improved health.
