

## SAYS DEMOCRATS NEED A RECEIVER

### C. B. Moores In Call for State Committee Scores Administration.

"If this is the best the democratic party can do, aided as it has been by \$2,000,000,000 worth of war orders in the last 18 months, it should have the decency to acknowledge its utter want of constructive capacity and ask for the appointment of a receiver to take charge of the country until the republican party can assume control, as it will, on the coming 4th of March."

This is the call to arms sounded to all republicans by Charles B. Moores, chairman of the state central committee, in announcing a meeting of the newly elected members of the committee in the Imperial hotel at 1 p. m. Saturday, July 8. Organization of the work of the campaign will begin that day.

In his announcement Mr. Moores reviews the financial and commercial condition of the country under the Wilson administration, and points out that while a comparative few are getting rich by selling goods to Europe through the accident of war, the people of the United States as a whole are constantly paying a "war tax" to make up the deficit in federal revenues caused by democratic departure from the republican principles of tariff protection. Regarding a second term for Wilson, he says:

"Woodrow Wilson told us in his 1912 campaign: 'Our platform is not molasses to catch flies. It means business. It means what it says.' Among other things it pledged Woodrow Wilson to the principle of a single term, and Woodrow kept his pledge by writing a confidential letter three months after his election to Representative A. Mitchell Palmer, urging him to defeat the resolution of Senator Cummins calling for a constitutional amendment providing for a single term."

Chairman Moores quotes Senator Borah, of Idaho, concerning the "profligate waste of money and the lavish appropriations of recent republican congresses," mentioned in the democratic platform in 1912. Borah said:

"We are spending \$200,000,000 annually in excess of the expenditures of those years which the democratic platform criticises as profligate. We have created more offices and provided for more salaries during two and a half years of the Wilson administration than during any 10 years in the history of the government for the last 50 years. We already have over 500,000 federal employes, and this administration has passed laws that in their ultimate working will call for 50,000 more. We could save \$300,000,000 annually and get better service."

That "Wilson has kept us out of war" is a "rank pretense," is another of the call's statements against the democratic party. "Who has kept out Sweden, Norway, Holland, Switzerland, Spain, Greece and Roumania? Beleaguered upon every side, the kaiser has all the business he can attend to at home and he has neither the power nor the disposition to make war upon us. Wilson has had as much to do with keeping us out of war with Germany as Bryan or Henry Ford. No president could have done less than he has done in his vacillating and equivocal course. Bernstorff, the German ambassador, and Secretary Lansing have been the real factors in the whole controversy. Conditions which none of them could control have made war with us impossible."

Moores declares Mexico's last chance for a stable government disappeared when Wilson practically forced out Huerta, and that the present Mexican situation is due to the course Wilson has pursued.

A flat claim is made that the income tax, federal reserve act and other so-called democratic achievements are in reality republican measures, and that the present administration is not entitled to any credit therefrom.

#### DO YOU KNOW THAT

It's worry, not work, which shortens life?

A cold bath every morning is the best complexion remedy?

Poor health is expensive?

The U. S. public health service has reduced malaria 60 per cent in some localities?

The death rate from typhoid fever in the United States has been cut in half since 1907?

Pneumonia kills over 120,000 Americans each year?

A flyless town has few funerals?

The well that drains the cesspool is the cup of death?

## We Believe the Maxwell is Greatest Motor Car Value on the Market

**B**UT our opinion would not be of any particular importance to you if it did not coincide with the facts. We only want you to look the market over carefully. Then we absolutely know that you will agree with us.

In the first place there is the remarkable Maxwell engine. No four cylinder motor of its size has more "pep" or go to it regardless of the price of the car it drives. It will climb hills on high gear in a manner that will astonish you. It is quiet and works day in and day out with a sound, business-like hum that is good to hear.

Any engineer will compliment the design of the chassis. And those who are not engineers cannot fail to note its simplicity and staunch construction. As for what it is made of, we can truthfully say that better material cannot be bought.

The operation of the car is simplicity itself—the brakes are powerful—the springs are long and flexible—the axles are strong and the steering apparatus, like the rest of the chassis, is built to stand the most severe service the car may ever have to face, wherever or however it is used.

Then if you consider looks important, and most people do, you will not find a more attractive car than the Maxwell at anywhere near the price.

And it comes to you fully equipped with all the attachments you will ever want or need; electric starter and lights, demountable rims, one man top, self-ventilating, rain-vision windshield, etc. All for \$655 (five passenger touring car) or \$635 (two passenger roadster).

We know you can't beat it.

Touring Car \$655

Roadster \$635

#### UP TO DATE EQUIP- MENT INSTALLED

Dr. W. G. Howe Complete Collection of New Appliances Seldom Found Outside Largest City Dental Offices.

Dr. W. G. Howe has just completed the installation in his new offices in the Wilson building of a complete set of the most up to date, sanitary, electrically and pneumatically operated dental appliances obtainable.

Modern dentistry calls for the application of electricity and compressed air in its operative, diagnostic and therapeutic departments. They are both factors in practicing preventative dentistry, and no one can deny that the future holds great promise for the dentist who prepares himself to perform the necessary cavity preparation and restorations with methods that are painless and efficient.

Briefly described the electrical switchboard distributes electricity to every appliance in use in the office, such as the electric sterilizer, the dentoscope lamp, the dental engine, the electric lathe, the automatic air compressor and the new complete set

of electrically operated dental instruments. These instruments include the examination lamp, antrum lamp, warm air syringe, atomizer, cautery, root canal drier, gutta percha excavators, bleacher point, gutta percha ball point, wax spatula, spray bottles and water bottle warmer.

The electric current for the operation of the instruments is changed to the proper strength and voltage by an automatic electrical machine known as a rotary converter, which maintains the electricity at all times at exactly the proper pressure and quantity. The compressed air for the operation of the electrically warmed air syringe, spray bottles and blow pipe is furnished by an automatic air compressor driven by an electric motor which starts and stops automatically and maintains a constant pressure in the air tank.

The new dental cabinet has all the latest improvements to render it absolutely sanitary, the shelves and tops being of white glass.

A ladies' dressing room has also been added, and withal this office has been equipped and arranged far superior to that which is usually found in a town of this size. In fact

it is only fair to say that few large city dental offices enjoy a practice large enough to warrant the installation of such complete and expensive equipment.

#### HENS BETTER OWN RECORD

Oregon Layers Surpass Widely Heretofore Performance.

Oregon Agricultural College, Corvallis, June 21.—After having shattered all records for one week's laying at the Storrs (Connecticut) egg-laying contest the Oregonians, entered by the poultry department of the Oregon Agricultural College, came right back the following week and did two eggs better.

The first week's record that excited the comment of poultry journals and newspapers all over the United States, was 62 eggs by the pen of ten hens. This was an average of 6 2-10 eggs per hen a week, almost an egg a day. The following week's record was 64 eggs or an average of 6 4-10 eggs per day.

How those Mexican whiskers do bristle!

Who will say now that a corporation has no patriotism or soul? Many of the large ones of the country are paying their national guard employees their full salaries while away on the border or in Mexico.

A guilty conscience never has to be told of its guilt.

Soon, now, we will begin to learn more details of our state of unpreparedness.
