

Slip a few Prince Albert smokes into your system!

You've heard many an earful about the Prince Albert patented process that cuts out bite and parch and lets you smoke your fill without a comeback! Stake your bank roll that it proves out every hour of the day. Prince Albert has always been sold without coupons or premiums. We prefer to give quality!

There's sport smoking a pipe or rolling your own, but you know that you've got to have the right tobacco! We tell you Prince Albert will bang the doors wide open for you to come in on a good time firing up every little so often, without a

regret! You'll feel like your smoke past has been wasted and will be sorry you cannot back up for a fresh start.

You swing on this say-so like it was a tip to a thousand-dollar bill! It's worth that in happiness and contentment to you, to every man who knows what can be gotten out of a chummy jimmy pipe or a makin's cigarette with Prince Albert for "packing"!

PRINCE ALBERT

This is the reverse side of the tin

THE Prince Albert tin, and in fact, every Prince Albert package, has a real message to you on its reverse side. You'll find it—Process Patented July 30th, 1907. That means that the United States Government has granted a patent on the process by which Prince Albert is made. And by which tongue bite and throat parch are cut out! Everywhere tobacco is sold you'll find Prince Albert awaiting you in sassy red bags, 50 shiny red tins, 100 handsome pound and half-pound tin humidor, and in that clever crystal-glass humidor, with sponge-moistener top, that keeps the tobacco in such fine condition—always!

Scientific Farming

DOLLARS FROM FORESIGHT.

The Farmer Who Notes Economic Changes Usually Makes the Profit. (Prepared by United States department of agriculture.)

Perhaps the most conspicuous cause of success in farming is prompt and fitting change in type of farming in response to economic pressure as indicated by the market price of products as related to cost. The American farmers who are most successful usually sense the operation of economic forces long ahead of their neighbors. A large number of farmers change an old established system only when forced by dire necessity.

Not only is there the greatest opportunity to any individual farmer through

SPECIAL PRODUCTS FOR THE MARKET.

quickly modifying his organization in response to changed markets, but such readjustment is of great value to the whole community, for such action in time becomes corrective of the changed condition from which it sprang. Let us assume, for instance, that there is a community engaged largely in live stock production and that through some cause feed prices advance to such a point that there is more money in selling the raw product than in feeding. Under such conditions a large number of farseeing farmers will quickly curtail their live stock industry and become sellers of raw feed products. This in turn has a tendency to reduce feed prices and to increase the price of live stock products, thus bringing about the former balance.

Spraying For Codling Moth.

In answer to a correspondent who asks when it is necessary to spray for the codling moth and whether spraying for the San Jose scale will hurt trees already in bloom, Zoologist H. A. Surface of the Pennsylvania department of agriculture says:

"It is always considered necessary to spray all apple, pear and quince trees for this pest when they are bearing fruit. If there is no fruit on your trees there is no need to spray for codling moth. As you doubtless know, this is the insect that makes wormy apples, pears and quinces. Every good fruit grower sprays for this pest, if for no other. The first spraying is made shortly after the petals or flowers fall, and the second spraying is made about a month from that date. The material that should be used is one gallon and one quart of strong lime sulphur solution, either home-made or commercial, in forty-nine gallons of water, and to this is added either one pound of dry arsenate of lead or two pounds of arsenate of lead paste. For the second spray use the same material as for the first.

"Where you have much San Jose scale present it is a good plan to wash all the bark of trunks or twigs that can be reached with a paint brush dipped in very strong lime sulphur solution or very strong thick soap solution, or spray the infested trees when the young are crawling on the bark with tobacco decoction, kerosene emulsion or soap solution. After the leaves drop this fall spray again with the strong lime sulphur solution."

"THREE C'S" OF MILK CARE.

Dairy specialists have evolved a simple little formula for the care of milk in the home, and the same formula will apply to keeping milk anywhere. It is the rule of the "Three C's," the "C's" standing for "Clean" and "Cold" and "Covered." Excellent rules for the dairyman everywhere, even though they were written with the consumer of the milk in mind. That first rule should be one of the cowkeeper's articles of faith, the second one means a well filled icehouse for the farm, and the third and last means care and forethought.—Farm Progress.

Range and Alfalfa

Land at reasonable prices and on 10 year terms Stockmen should get in while the getting is good. We have sold 98 sections during the last 90 days

THE UNIVERSAL INSTRUMENT

Thirty years ago the telephone was a luxury. Today, through personal initiative and private enterprise, it has become a necessity within the reach of everybody. Where once a business had but one telephone with a limited talking range, today that business has service with a range three-quarters of a continent broad, and every branch of every business is linked to every other by an intercommunicating telephone system.

The telephone has earned its responsible place and there are now 8,990,000 Bell telephones in this country, over which 26,000,000 talks daily.

Every Bell Telephone is a Long Distance Station.

PRINTING FOR PARTICULAR PEOPLE

This is the business of the Job Printing Department of The Argus.

Every dollar that an Ontario business man sends to out-of-town printing establishments is gone from the community just as completely as is the dollar that goes to a cut-throat mail-order house.

Did You Ever Think of that Phase of the Printing Question. Mr. Business Man?

When it comes to boosting for Ontario and its rich lands and its possibilities—it is the local papers, not the big job printing plants of the east or even near-by cities that are called upon to do that. The local papers not only boost for Ontario but they employ labor here. The men who work here spend their money here. They are your customers. They contribute with you to the support of every public institution. They are your friends, and your neighbors.

The next time you think of getting some printing done, let us figure with you on the work. So long as Ontario is a small city the volume of printing will necessarily be small. You know what that means. It means that with a small volume of printing to absorb the overhead charges that many jobs cannot be done as cheaply here as they might be in some big plant, and this is important, how can that volume be increased unless the local business men co-operate to make it grow?

Whether the job is large, or Whether the job is small, it will receive careful attention

The Argus is equipped to do your work and do it well. We will endeavor to please you with a neatly arranged typographically correct job, well printed on the kind of stock you want—A trial order will be appreciated.
