Better than the Ordinary Hay Rake

There is a big difference in hay rakes. This difference affects not only the ease of operation and good working qualities, but the length of service as well.

We don't know of a hay rake that is so thoroughly made as the John Deere Self-Dump Rake.

For example, its heavy angle steel frame never sags—the adjustable tie rod keeps the frame true, always.

The heavy steel wheels with an extra number of staggered spokes, protected by the channel steel tire, are interchangeable, giving double wear on the ratchets.

The arched steel axles give the proper pitch to the wheels—the

wheels never pull at the top and out at the bottom.

The dump rods are reversible, giving double wear at this important point. Tooth holder accommodates large or small number of teeth.

You can maintain the good working qualities of the John Deere Rake for years.

And from the operating standpoint, it is simple and easy to handle. With one foot lever, you can keep the teeth in working position at all times; with the other foot lever, the rake is instantly tripped. A convenient hand lever serves to adjust the teeth for close raking, and to elevate the teeth for transportation.

We want you to come in and see this rake. The extra service you will get out of it makes it the most profitable hay rake to buy.
