Buy Your Winter's Coal NOW

From all indications, coal will be harder to get next winter than it was last year. And if freight rates continue to advance, the price will be higher.

A little effort on your part today will save you from worry and discomfort next winter. There is plenty of coal now. Don't take any chances; fill your bins with—

Jesse Knight's Spring Canyon COAL

Then you can laugh at cold weather. You can also be sure that you are getting full value for your money in high, even heat and long-lasting qualities.

Don't let the sun deceive you. Winter is not far off. Call our Coal Yard today.

Boise Payette Lumber Co.
AL. CHANCE, Manager of Ontario Yard

FOR SALE!

My home place of 35 acres adjoining the townsite of Ontario; 15 minutes walk from city schools; well improved; modern house with electric lights, bath, water, electric range, furnace, etc.

Thomas W. Clagett

A concern that gives the same degree of refined service, maintaining the same high standard of character toward everyone without regard to their financial condition.

DIVERSIFIED FARMING IS THE KEY TO PROSPERITY

Wider Range of Products Will Keep Things on Even Keel

(From the Farm Bureau News)
We have heard men grown old in the practice of agriculture, say that a one-crop country never did and never will amount to anything. Logic and the "book farmers" bear them out in this, for it is evident that the fortunes of a one-crop country go up and down with every whim of climate, market or other factor. Stability cannot rest on quicksand. By diversification in crops and animal products enough props are put under the structure so that it will stand if one or two of them become badly bent.

For many years Malheur county has been practically a one-crop county. That crop is alfalfa hay. The market has come from the needs of livestock ranged in the interior counties during the summer and brought to the alfalfa sections in the winter. Owing to crop failure in other parts of this and neighboring states and the increased demand for feed because of war conditions, the market for hay has been good in recent years. To reach this market, however, no inconsiderable amount of hay baled was shipped last year and the year before.

But let us take a look at prospective supplies of hay and the demand for it as indicative of the county's future prosperity. Everyone knows that there is as much hay as there ever has been in our own county and great quantities of it tied up by quarantine in our neighboring State. There is no serious crop failure this year where we sold hay last. On the other hand, the quantity of livestock is reported by the Department of Agriculture as considerably reduced. Financial institutions tell us that the buying power of the stock man is on the blink. It looks as if we had waited one year too long to turn toward diversification to increase the variety of saleable products.

Depletion of the range has been going on for years and the ranchers of the interior sections of the county are, and should reduce the herds and raise better bred stock. They can grow their own feed cheaper than it can be grown on the high priced lands along the Snake. With the construction of reservoirs, and sinking of wells more land will be brought under cultivation. By using better hay and improved varieties and growing sunflowers for silage the acre production will be increased. The present movement to reduce the number of stock kept, brought on by financial difficulties has only resulted in hurrying a transition that was already in progress.

There will always be need of some hay to make up deficiencies in the interior. On the other hand, there is land on the lower levels which cannot very well be farmed to anything but hay, and a considerable part of the production from the best lands must be hay in order to keep up fertility. But a general movement to get onto safer ground should be taking place. A greater variety of crops, well chosen with reference to yields, available markets both present and future, and so forth, is needed, together with more farm livestock of the kind that can show a profit and is suited to the individual under whose care the animals come. A moderate diversity of products is good for the individual farmer and a fairly wide diversity of products in a community gives stability to all business.

MAKE JELLY WITH LESS SUGAR

The following suggestions for making jelly with less sugar, have been sent out by the office of Home Economics at Washington.

1. Use 3-4 cup or even 1-2 cup of sugar per cup of juice instead of 1 cup of sugar. The resulting product will not be so sweet, but you will probably be surprised that you like it better than the sweeter product, especially when you become used to it.

When reducing the amount of sugar add 1-4 teaspoon of salt per cup of juice. The salty taste will disappear after the jelly has stood a

few weeks, but the flavor will be richer and the absence of sugar less noticeable than if the salt is not used.

2. Substitute some other sweetener for half of the granulated sugar called for in the original recipe, e. g. if the recipe calls for 1 cup of sugar, use 1-2 cup granulated sugar and 1-2 cup of corn syrup, molasses, refiner's

syrup, maple syrup or honey. Some of these sweeteners have a pronounced flavor of their own. In such cases use these sweeteners only with fruits of distinctive flavor, such as grape, cranberry, plum, current or loganberry.

3. If neither of these methods prove desirable, fruit juices may be

canned unsweetened and made into jelly when sugar is available. In some instances the freshly made jelly is more delicious than it is after it has been stored for several months. This is especially true of ripe grape jelly, which is likely to deposit tartrate crystals after standing for some weeks.

What we can do for you in clothes

WE'LL give you fine all-wool quality and the best style to be had.

We'll reduce your clothes expense. Hart Schaffner & Marx clothes outwear other clothes.

We'll give your money back if you're not satisfied.
