## ASPARAGUS STALKS TOUGHEN

To prevent the toughening of asparagus it is best to keep the stalks with the butts in an inch or so of water and keep the stalks from being too much exposed to the air. Any moist chamber such as a big glass jar kept over the stalks while they stand in water will prevent them from getting as tough as they would otherwise. Tough asparagus is also caused by the formation of woody cells called lignin, that which is home grown and quickly consumed after being cut.

*The Grand Canyon of the Colorado*

Here is an unparalleled spectacle—a sight never to be forgotten—one of nature's most stupendous wonders.

The Grand Canyon is about 250 miles long—with a width at the top varying from 5 to 12 miles. At some places it descends to a depth of a mile below the plateau surface. Its best effect, as revealed by extreme depth and brilliancy of coloring, is from a point opposite the Kaibab Plateau—about 65 miles north-west of Flagstaff, Arizona.

Motor roads lead to the Grand Canyon through Ashfork, Williams and Flagstaff, Arizona—and all the way you can get "Red Crown," the all-refinery gasoline.

You'll be glad if you make your Grand Canyon trip a "Red Crown" trip.

Look for the "Red Crown" sign on service stations and garages.
