## Every Potato Means Additional Profit

When the price per bushel you receive for your potatoes is low, good profits can still be made by saving time and labor and by getting every potato in the field. It costs you no more to harvest completely, and you get the extra dollars for your increased crop, if you use a

## HOOVER POTATO DIGGER

The Hoover Potato Digger digs up all the potatoes in the field and piles them in neat rows where they can be handled with minimum labor. This digger has proved to be an especially good investment to all potato-growers who have used it.

**The shovel** is of best quality high-carbon crucible steel and shaped so as to gather the potatoes with the least possible loss. No danger of cutting the potatoes to the extent that a plow or hoe does. Stone guards can be used in stony ground. You can raise and lower the shovel while the machine is in motion. All adjustments are made from the seat by convenient levers.

**The vine-separating rear rack** has a backward and forward motion that sifts out all dirt and deposits the potatoes in a compact row on clean ground directly at the rear of the machine, while the vines and trash are deposited at one side.

**Six roller bearings** and wide tires on the wheels assure light draft.

**Patented Double-Action Front Truck** permits the digger to be turned in a very short space.

**Solid steel frame,** strong main sides of Bessemer steel, beams of best quality charcoal malleable castings, and steel chains and hardened steel sprockets that greatly resist wear.

Don't fail to see the Hoover Potato Digger before you harvest your potato crop; its use means greater profits. Also ask us about Hoover Engine Drive Potato Diggers—two-horse machines under all conditions, and any other potato tools you require.
