carry on flood water. The grader smooths the surface of the road graded by cutting; the drag by pulling. The grader shoves loose dirt to the center of the road, while the drag shoves particularly puddled dirt toward the center of the road, filling up all ruts and small holes at the same time. The grader of

necessity must be used when the draft is too great in order to save wear on horses. This condition exists when the roads are quite porous but not wet and

heavy. On the other hand the drag should be used when it will give the best results and when the draft is not
