

DRIVING AWAY CAPITAL

MANY papers in the country are insisting that our present legislation tends to drive capital from the state and it is undeniably true. Principally among these are the Oregon Voter, edited by C. C. Chapman, and the Oregon Manufacturer, edited by E.

Mr. Chapman is statistical and somewhat sarcastic in his articles. Mr. Hofer is an uncompromising fighter against innovation of any kind which curtails the rights or refuses every demand of capital.

There seems not much attention paid to the dispensation which has slowly come upon the country but the realization may be sudden if delayed. Capital may make generous de-mands and promoters seize enormous profits from a developing country, but when a slump comes: When a cessation of migration occurs from one part of the country to the other, the excessive demands of capital cannot be met without causing unrest, dissatisfaction, high taxes and unfair blows at this same capital.

The principal cause of murmuring in Oregon just now is the fight between the Portland Electric owners and the Jitney. The one claiming the right to everything in sight that it may meet the enormous overhead charges for interest on profits grabbed by a series of promoters and dividers of the nickel of the proletariat.

Poor's manual in 1912 showed a liability of some \$50,000,000 on the Portland Ry. L. & P. Co. How much of this is water no outsider knows, but the securities are now probably held by innocent purchasers and they must have their interest even though the people do not ride

How much of the \$50,000,000 represents the intangible franchise, no outsider knows; for the inextricable mixing of common, preferred, retired and reissued stock, bonds, debentures, funding and refunding securities, notes, etc., would puzzle the best accountant in the

Portland and Oregon have slumped and of course the nickel is hard to get unless new nickels come to us. Will they come? Chapman and Hofer say "not unless we quit fighting capital."

How if capital quits fighting for too heavy a dividend? Has not the day arrived when huge promotion profits must be foregone and water squeezed out of securities? Who foots the bill? Nickels of the people in enormous numbers must go for interest on money never invested. \$200,000 in interest means 4,000,000 five cent fares. Thirteen and one third fares for each of Portland's 300,000 population.

So with the O. W. R. N. R. R. and the S. P. R. R. Freight rates must be made to cover millions upon millions of water while every tendency is to curtail the growth of the state. Forest reserves assisting in advancing the cost of timber and decreasing the area for improvement. Two million acres of Land Grant held up which would help some if placed on the mar-

The automobile as a toy; the automobile as a farming implement; the automobile as a means of transportation for hire; has come to stay. It must have its right to attack the past. If the past cannot meet the present it must pass into complete oblivion.

To use the genius which has created the steam engine, the Deisel gas engine, the automobile engine and the flying machine, is the right and duty of mankind. The proletariat must have their benefits and if the reactionary cannot live, let his funeral sermon be preached and on his tombstone the words inscribed:

'e took what he hadn't orter An' died of too much water.

For that's what's the matter: too much water. The people's money, representing the rivulets winding through the mountains, has met a dry season, and the pouring on the plains of financial interestdom has ceased.

Fight capital? Never! Give capital justice reserving that same justice for others, among which may be found the poor devil who likes to ride in an auto rather than hold onto a strap as the car lurches around the corner and send four and one quarter cents of the five he paid to some widow east who has been sold a six per cent bond, taken at 90, at a premium yielding her 3 per cent.

This taking of an unearned increment is what's the matter with Malheur county. Trowbridge and Nivers have killed the country and the Bully creek fiasco has rendered it impossible to finance an irrigation project without permitting capital to get more than its fair share.

Could we get our projects examined by investors all might be well. But to have them examined by promoters and bonds offered on a huge price per acre will never help us. We must give capital its interest and let the land pay the cost and no more.

PORTLAND, Oreg., Nov. 25 .- To the Editor: The election is over and

it is now up to all of us to make a living regardless of politics. As a matter of fact, present day politics has small bearing on any of us individually except as policies ad-

vocated by politician and laws passed, encourage or discourage industry and the investment of capital. The politician and his pet hobbies with which he experiments on the people and for which the people pay

the bill, gets much more attention and consideration than he deserves. He seldom maintains a payroll, usually pays no taxes and in most instances is put in office not be cause he is qualified for the job, but because he needs the money and is a good vote getter. The man who starts a small indus-

try employing 5 people is doing the community more real good than 999 out of every thousand politicians who claim to be working for the "dear people."

This is plain talk but you know it's

What we want is industries and payrolls, low taxes, and conditions under which capital will come freely into our state.

There are probably not two bills hat actually need passing at the coming legislature while hundreds could be repealed, if the usual practice is followed, however, hundreds of new ones will be passed and industry will pay the bill.

Our fight is to place industrial acbread and butter ahead of hot air and It matters not to what party you

Pacific Coast Manufacturer,

"DOING THE DISHES"-ELECTRICALLY

ne Cent Will Purchase Enough Electricity to Wash the Day's Accumulation of Dishes in the Average Home.

If a thousand women were asked to vote on the most distasteful task among the numerous duties of housekeeping it is fair to assume that dish washing would receive a safe majority. Day in and day out, three times a day, seven days a week the accumulation of soiled dishes must be disposed of. Hot, not lukewarm water, 🕱 🛣 🛣 🛣 s necessary to remove the particles of food from the plates and silver ware. After the housewife has kept her hands in soapy dishwater raised to almost scalding temperature and rinsed and wiped the dishes, and rethree times a day, it is hardly to be wondered at that so many women Mail closes 7:30 a. m. have anything but soft well appearing hands fit for doing fine needle work, or to show at the card table or club. No Broken Dishes with Electricity

With the appearance of the electric dish washing machine, how-ever, all this is changed. No longer is it necto do the dish washing and break expensive table ware. Just screw an attachment plug into the nearest electric lamp socket, attach a connecting hose to the hot water faucet, scrape and place the dishes in the washing chamber with washing powder or soap and turn on the water and electricity. The hot water fills the washing chamber and is then shut off. In the meantime it sprays over the dishes softening the grease and food and preparing it for easy removal when the chamber is full of hot soapy water. The small motor then starts rocking the washing chamber, throwing the tivity ahead of political activity, water rapidly back and forth and allowing it to cut the grease and dirt from every dish, cup and glass. In 15 minutes time and at a cost of less than a cent for electricity the dish washing machine will wash the days accumulation of soiled dishes with far less risk of breaking or chipping them than it is possible to do with the frequent handling involved in the hand washing process. After washing, the reason that we think that Mr. Hofer dish water is drained out of the washgoes a little beyond the point justi- ing compartment, and it is again filled for rinsing off the dishes. After the All will admit that politics stir the rinsing water is drained off it is unnecessary to wipe the dishes, for they will dry quickly from the residual heat retained from the wash water. A Combination Kitchen Table and

Dish Washer. One of the new models of electric dish washers not only "does the dishes," but at other times when it is not needed for dish washing it serves as a kitchen table. The top raises and lowers allowing the dirty dishes to pears to us greatly in error to hold be scraped and placed out of the way its possession a crime and its pos- and out of sight in the washing chamsessor a criminal. No business is run ber while the table is being used for necessary to flood the dishes with hot Thursday of each month. All interwater and switch on the faithful electric motor.

Hundreds of women who can ill afford to retain hired help at the present high prices would be glad and willing to do without kitchen girls if they knew of some scheme whereby they could get rid of the bugbear of dishwashing. The electric dishwasher offers a simple, cleanly solution of the problem at a cost well within reach of the average purse. It does away with unsanitary and ugly dish towels and washrags in an otherwise spotless kitchen, and forever settles one household task which has made housekeeping a distasteful occupation.

HERALDS OF THE COMING KING (By Request of the Seven Day Adventists.)

The Laborer and the Capitalist Let us notice, as briefly as is comif they rule wrongly, let them foot patible with clearness, a few of these undeniable signs of our times. In James 5:1-9, we are informed that We are in accord with the repeal in "the last days," men will "heap" of many bills but the people refused treasures together; that the laborers to clean up the statutes as regarded will be oppressed, and defrauded of two obnoxious and worthless chapters, their wages; and that the industrial There are two that need remodeling conflicts will grow more and more

The unprecedented fortunes being We are also in accord with the idea amassed by corporations and synditice, and extortion-and all in "the last days."

The New York World of May 1, Most people abuse the idle rich and 1916, informs us that there were "one million eight hundred thousand workers on strike or lockout throughout the United States today."
