DESTROYERS OFF JUTLAND

By Reginald McIntosh Cleveland in Literary Digest.

If lost hounds could speak when they cast up next day after an unchecked night among the wild life of the dark they would talk much as our destroyers do.—Rudyard Kipling.

They had hot scent across the spumy sea, Gehenna and her sister, swift Shaitan, That in the pack, with Goblin, Ebilis ran. And many a couple more, full cry, foot free, The dog fox and his brood were fain to flee, But bare of fang and dangerous to the van That prest them close. So when the kill began Some hounds were lamed and some died splendidly.

But from the dusk along the Skagerack, Until dawn loomed upon the Reef of Horn And the last fox had slunk back to his earth, They kept the great traditions of the pack, Staunch-hearted through the hunt, as they were born, These hounds that England suckled at the birth.

KEEP COW'S RECORD

Value of Cow-Testing Associations Demonstrated—Appearance Often Deceptive in Dairy Cows.

That the appearance of a dairy cow can not be depended on to indicate her production of milk is illustrated by a demonstration conducted under the auspices of the Dairy Division of the department with a herd of nine cows at the National Dairy Show held recently at Springfield, Mass.

A year's record of milk and butter fat already had been made for all the cows of the herd. During the show complete records of production and feed consumption were kept and in every case the previous records were duplicated. Some of the cows were of poor dairy type, yet were good producers; others were of good dairy type, yet were poor producers; still others of similar appearance had greatly different records. Of the last-named class were Nos. 8 and 9. Many experienced stockmen selected No. 9 as the better of the two, but the records showed that for the last year No. 8 gave 8,445 pounds of milk and 346 of fat compared with 4,279 pounds of milk and 198 of fat for No. 9. This served as an object lesson to the hundreds of people who daily viewed the demonstration that good dairy type is not always associated with large production and that poor dairy type does not indicate lack of large yield.

"What does it cost to keep records?" was a common question of the dairymen. In cow-testing associations, where the above-quoted records were made, the charge is \$1.50 a month for each cow, and in addition the board of the tester for one day each month. With feed, labor, and live stock so high, it certainly is imperative to eliminate every unnecessary expense like the "boarder" or "robber" cow that fails to pay for even her feed.

In the big room at the dairy show where the cows were stanchioned were several hundred comfortable seats. Here several times each day well-known dairymen from various parts of the country talked to the

PROMISING NEW FRUITS

The behavior of a seedling Chinese litchi tree in California, which is now about 14 years old, and of inarched trees in Florida, now 7 years old, indicate that there are areas in Florida and California where this unusual fruit tree may be expected to live and bear if the young plants can be protected, or at least escape severe frosts until they become thoroughly established. The fruit produced by the experimental trees, according to the specialists of the department who have been working for its introduction, is excellent, and its appearance and shipping quality are certain to insure a ready sale on the fresh-fruit market. The fresh litchi is superior to the dried so-called litchi "nut," \$300,000 worth of which are imported annually into this country.

large audiences on dairy problems, illustrating their remarks with the cows of the demonstration herd. Especial emphasis was laid upon the value of records in economical management.

Cooperative bull associations were carefully described and their many advantages explained. That it was possible to have high-class bulls of the finest breeding for the use of a dairyman with only a few cows seemed to many farmers as too good to be true, especially when the cost was even less than in the case of scrub bulls. In this connection the charts that illustrated the conditions at Roland, Iowa, before and after the organization of a bull association, elicited much interest. At that place, for a yearly investment of \$7.50 each, the members have the use of five \$240 bulls for 10 years.

A BALLADE OF SUNSET

By M. A. B. Evans in Literary Digest

Oh, fair is the world in the light of the morn,

And bright are the colds in the far eastern sky,

When the sun is just rising, the earth to adorn,

And the shadows of night are beginning to fly.

Fair the brightness of noon, when the sun is on high,

And a riot of light o'er hamlet and hall—

But the eve brings new glories of earth to the eye,

For the colors of sunset are fairer than all.

With the bursting of buds on the willow and thorn

Comes the spring, with its snow-drops and violets shy.

The summer brings glory of yellow-corn,

A wealth of bright bloom, fields of wheat and of rye.

With colors that glow, and our hearts satisfy,

Come the gay brilliant leaves of the bright early fall,

Like the close of the day, as the shadows draw nigh,

For the colors of sunset are fairest of all.

Fair indeed seems the world, when at first we are born,

And all of its glories we learn to descry,

Ere the noontide of life has yet taught us to scorn

The dross that can glitter, but can not supply

That comfort of soul upon which we rely,

In the autumn of life, ere the great final call

Shows the brightness that silences every sigh,

For the colors of sunset are fairest of all.
