word your our crain hard and creep forward in this O cold weather ?

If the clutch adjustment is correct, your trouble is probably caused by using an oil that does not flow freely at low temperatures. The oil congeals between the plates of the clutch, binding them together as if your high speed were partially engaged.

Zerolene No. 1 (Light) flows freely at 1. w temperatures and gives correct lubrication from the start.

Because of its low cold test it eliminates slicking of the clutch plates, hard cranking and excessive wear on bearings and cylinders while the engine is warming up.

Drain your crankcase, fill with Zerolene 140. 1 (Light) and forget cold weather lubrication troubles.

For sale by dealers everywhere and at our stations.

STANDARD OIL COMPANY (California)
