Entered as Second Class Matter February 19, 1914.

At postoffice, Lents, Oregon, Under act of March 3, 1879

Published Every Thursday at Lents, Ore., by the MT. SCOTT PUBLISHING CO.
H. A. DARNALL, EDITOR AND MANAGER.

Office Phone: Home B-6111-1111. Residence: Tabor 2813

A RECENT popular magazine discusses at some length a new treatment for the cure of cancer that ought to be of interest to every one, doctors, the afflicted and the sound. The doctors ought to be fully aware of the advance that seems worthy of announcement in order that they may carry relief to the afflicted in their vicinity. The afflicted ought to be interested because they live in hopeless desperation at present. They have been disappointed by repeated attempts to secure relief through medical treatment, X-rays, radium, and surgical operations, and have come to believe it is simply a question of being virtually devoured by a slow process.

Whether cancer is more prevalent in this country than ever before is problematical. But of one thing we are sure, there is more of it in evidence now than ever before, probably due to greater publicity. Perhaps cases now diagnosed as cancers were formerly reported as abdominal tumors or obstructions.

Dr. Alexander Harowitz of New York is the author of the new treatment which consists in the injection of a vegetable compound called Autolysin into the circulation. Dr. Harowitz is a botanist of repute, and his intimate study of plant chemistry led him to evolve a theory that chemical elements secured in twelve vegetable substances, selected after examination of hundreds of plants and drugs, possessed the required properties necessary for combatting the disease. He spent many years arriving at his conclusions, but the experience of numerous New York City physicians indicate that the proposed treatment offers extraordinary hope. Briefly, the prime element in the new treatment is chlorophyll, which disintegrates the carbon and oxygen combination in the cancerous cell. Another extract entering into the compound is chromoplast coloring matter of plant foliage; which stimulates the white blood corpuscles; other elements are believed to neutralize the poison excreted by the cancers. At least the treatment has one advantage. It is not dependent on the introduction of a questionable antitoxin into the system.

The treatment has been tried on several hundred patients with excellent results.

A GOODLY number of people are worrying about a Congressional movement to limit the size of parcel post packages to 50 pounds. It looks to us that fifty pounds is about twice the size of a package that ought to be sent. If a fellow wants to ship a stove there ought to be some way for it to reach its destination besides being passed through the mail.

The same is true of sending your wife to summer with her relatives in the east. Why should she be sent crated as mail, at the expense or convenience of the national government, and delivered at the risk of killing the carrier on the other end of the line. They are sending babies through the mail now. Grown up people may safely be supposed will be considered next.

Was it the original intention to have the parcels post take the place of the freight service? Our remembrance was that it was an anticipated convenience and in some measure an econ-

omy. If the government means to do the business of the railroads it ought to maintain lines of its own. Just how it is legitimate to legislate a public service company out of their business would be difficult to explain.

The president of the Warren Construction Company hasn't been seen for some time, and yet the leading Portland dailes have not observed it. It has been suggested Mr. Hill's expenses did not end when the \$40 a week item was eliminated.

The Warren Construction Company's representative at Roseburg is promoting a road bond issue by circulating the election petitions.

Russia is getting back at the Turks for those atrocities. Grand Duke Nicholas has ordered his prisoners to bathe.

The report that St. Helena is in readiness for the Kaiser, recalls the well known recipe for cooking o'possum.

Every time a Turkish soldier falls, about 110 women have to put on crepe.

Nailing a lie won't always keep it down.

NOTES OF THE W. C. T. U.

A candidate for election at the primaries for the position of county school superintendent announces his stand for the principle of every boy to be taught to earn a living and every girl taught to make a home. This proposition is entirely wrong. Many of the social evils are founded upon the dependence of one half of the people of the world upon the earning capacity of the other part. Poverty of the female and affluence of the male. The school superintendent of this enlightened age needs for his slogan, "teach every individual to earn a living and instruct every boy and girl in the duties and responsibilities of the home."

The next meeting of Mt. Scott Union will be held on March 28 at the home of the vice-president, Mrs. Geo. L. Carr, 7892 Sixty-second avenue. Leave the car at Rayburn avenue and go south two blocks.

At the meeting of Mt. Scott Union this week a committee was appointed to urge upon the city authorities the enforcement of the curfew law. Steps were taken toward the establishment of a comfort station in Lents, and two dollars were appropriated as a part of the pledge toward the upkeep of the social center at 171½ Tenth street. Members were invited to attend the meeting of social welfare workers at central library Wednesday morning. Mrs. Addison gave an address on "A Commercialized Press." Mrs. Sommerfeldt presided. A letter was read from Mrs. Netta Dunbar, former president, now a resident of Long Beach, Calif. Her house number is 437 Almond Avenue. Members of the Union are asked to send a post card shower to Mrs. Dunbar within the week. Little Dora has been out of school for six weeks with an affection of the eyes.

Pruning Trees and Shrubs

A little care given to the pruning of ornamental trees and shrubs during the early part of March will do much to control their growing and flowering habits and enable the home owner to have well-formed plants and well-trained hedges or boundary plantings. The pruning of ornamental trees and shrubs is, in fact, one of the first duties that may profitably be performed in the home garden. The amateur, however, should not make a ruthless assault with shears or pruning knife upon everything in his yard.

Flowering trees and shrubs that bloom in the spring or early summer should not receive radical pruning at this time, according to the garden specialists of the department. Of course, if on these plants there are dead or weak branches, these should be taken out, and any crossing limbs that are rubbing and seriously interfering with the growth of the brush, should be removed. The tips of the limbs, however, should not be cut off, nor should any young wood that does not interfere with the growth of the bush be removed. It must be borne in mind that

Health In The Suburbs

BY LORA C. LITTLE

There is a profound lesson in the difficulty of adjusting Oregon to saloonlessness. Soft drinks cannot be sold in quantity to compare with alcoholics, hence law-abiding near-beer houses must eventually fail. Where conducted in connection with eating-houses the temperance bar may live. Not otherwise.

Alcohol forms an artificial and controlling appetite because it is both useless and injurious as a drink. Grow addicted to the useless and you become more or less an idler and waster. Add to your habit the quality of harmfulness and you become a slave. To the community the net results of your slavery will sooner or later be a considerable burden of expense and loss.

I have much sympathy for the decent brewer, distiller and saloonkeeper in Oregon, because in this sudden and violent spasm of civic virtue they are the chief sufferers. All of us, I maintain, were to blame for the drink evil. Therefore there might have been a more equitable method of making Oregon dry.

Negro slavery was a sin of the whole nation, not merely of the South, though confined to that territory. But the self-righteous North refused to pay its share to foot the bill and end it. The result was, the North after all had to pay many times over in cash, besides the frightful loss in human life. Even the prostration of the South reacted on the North and added to the bill.

Adjustment in all such cases is speediest and least expensive when the community frankly accepts the situation and endeavors to eliminate even the spirit of the forbidden thing.

In the South failure to accept the negro as a brother man and to labor heartily for his education and uplift (not, of course, to treat him as an equal when he was not) is responsible for most if not all the trouble with the negro since, as well as for much of the degradation of the whites in former slave territory.

The human system requires considerable fluid to keep it nourished and healthy. If taken in the form of pure water there is little danger of imbibing too much. Indeed in some diseased states a large quantity of water can be drunk with benefit. In normal persons the sensation of thirst is the guide to drinking, just as in the normal hunger is the true guide to eating. Eating and drinking are legitimately for the satisfying of hunger and thirst to the end that we shall be fit for our duties.

Whenever eating and drinking are followed for the pleasure of them, then we begin to grow abnormal appetites, our desires are false guides, and the foundation of physical disease is laid. The moral disease has already become established—namely, sensuality.

There is no danger that we shall hurt ourselves consuming Bull Run. Or

the blossom buds for this year's flowering were formed last year, and every shoot removed takes off that much of the prospective blossoms.

Trees and shrubs that bear their flowers in midsummer and which were not pruned in the fall may be pruned at this time. Plants of this sort are the Rose of Sharon and the shrubby hydrangea. Where the largest possible mass effect is desired, these plants should be pruned but little. If the aim is to secure the largest possible trusses or blossom heads, last year's growth should be pruned back to two or three eyes to a stem. Such severe pruning, however, is not conducive to the most attractive development of shrubs.

Climbing roses should not be pruned at this time except for the removal of surplus or interfering branches. Every bit of wood removed now reduces the amount of bloom the plant will bear during the coming season. Roses used in border planting should be treated in exactly the same way as other shrubs, except that many of these species will be improved by having all their old wood cut away once in every five or six years. This would mean cutting all the old canes off within three or four inches of the ground and forcing the bush to throw up entirely new wood.

Roses used for cut flowers, like the hybrid perpetuals, the hybrid teas, and teas, should be severely pruned. The hybrid perpetuals may be cut as soon as freezing weather is past. Pruning of the hybrid teas and teas, however, should be left until the young growth has started. In both cases the plant should be cut to within 6 inches or 1 foot of the ground. Four or six eyes to a stem is about the proper amount of wood to leave.

SKIMMED MILK HARD DIET FOR YOUNG CALVES

Calves raised on skimmed milk are usually rumpy, pot-bellied, and suffer indigestion. Whole cow's milk is a perfect food for the calf, but skimmed milk is not. When the fat is removed a substitute is sometimes made by adding a handful of flaxseed meal or corn

nourishing drinks, like grape-juice, buttermilk, etc., they should be taken as food and at mealtime. In combination with them some light, compatible food may be eaten. Fruit, or a green salad with the buttermilk; nuts or cheese with the grape juice. To add either drink to an ordinary meal is a dietetic blunder.

This indicates that the present drinkshops are still catering to false appetite, and even so far as they win they are a failure and in the end the community suffers. A bit of verse by Coventry Patmore points one moral I am trying to draw:

"Who pleasure follows pleasure slays;
God's wrath upon himself he wreaks;
But all delights rejoice his days
Who takes with thanks, yet never seeks."

In many directions there is need for reform. The useless and the mischievous have become entrenched in personal habit and social custom, but like superfluous public offices, once created many persons have an interest in perpetuating them. Take canned goods. They are inferior to those that are fresh, and though they have their place in camps, mines, and in a most limited way in the ordinary household, yet the greed for wealth causes manufacturers and dealers to push their sale far beyond what is for the health and wellbeing of the community. Because these foods have a limited field of usefulness, wise business men should see to it that they do not greatly overstock the legitimate market. But does anybody scarcely consider such motives? No; and for that reason comes misery to the world.

When I want to estimate the thriftlessness of a family, I note the tin cans in the backyard before the spring cleaning. They are a sign of wastefulness and of ignorance of hygiene.

The moment, however, I denounce the canned food habit, I touch the purse of the grocer at the corner, who tells me there is no money handling fresh stuff.

Nevertheless, I am right, and the whole country would be healthier, happier and more prosperous if it heeded this great, but despised, Law of Use.

Here is a favorite text of my Socialist friends. They would make everybody heedful of the law referred to, by removing profit from the world. It never seemed to me a desirable remedy, nor a real cure. The cure of all our troubles lies in the hearts of the people. When they desire the useful before all else—in their work, their acquisitions, their recreations—then society will grow into divine order. So long as the deepest desires of the collective human heart are selfish and separate from the common good, no civic machinery will bring justice and prosperity.

meal, but this sort of fat is not a full substitute for butter fat.

It is still a debatable question whether it pays in the long run to rob the future cow by stunting the calf for the sake of immediate profits. The practice of taking the calf immediately away from the cow is the usual thing in the dairies and, assuming that it is an economical thing to do, the question is how to feed calves on artificial food and keep them growing properly.

During the first few weeks the calf is not capable of digesting normally any food save whole cow's milk. If he must subsist on skimmed milk, a little flaxseed meal or corn meal had better be added to the ration. The milk should always be given warm and never when it is frothy. Calves should never be given enough skimmed milk to entirely satisfy their hunger. If indigestion develops they should be kept on short rations for a day or two. If scours develop a little formalin added to the milk, combined with a restricted diet, will usually control it within a few days.—G. H. G.

Colds Quickly Relieved

Many people cough and cough—from the beginning of Fall right through to Spring. Others get cold after cold. Take Dr. King's New Discovery and you will get almost immediate relief. It checks your cold, stops the racking, rasping, tissue-tearing cough, heals the inflammation, soothes the raw tubes. Easy to take, Antiseptic and Healing. Get a 50c. bottle of Dr. King's New Discovery today. "It is certainly a great medicine and I keep a bottle of it continually on hand" writes W. C. Jessemann, Franconia, N. H. Money back if not satisfied.

An Ideal Spring Laxative

A good and time tried remedy is Dr. King's New Life Pills. The first dose will move the sluggish bowels, stimulate the liver and clear the system of waste and blood impurities. You owe it to yourself to clear the system of body poisons, accumulated during the winter. Dr. King's New Life Pills will do it. 25c. at your Druggist.

Your Bank Account

Is more than half of your business resource. Character, reputation and business ability, all count, but the cash back of a man "talks," when it comes to business interest. This is as true for a farmer as for a merchant. Having one of our check accounts will impress your acquaintances with your financial standing and appeal to them more than cash in hand. For safety and influence carry a bank account.

THE MULTNOMAH STATE BANK
Lents Sta., Portland, Oregon

WILL BE A FINE PLAY

"The Other General Fuller," a three act farce comedy, will be staged for St. Peters Church Friday evening, March 17th, in the Yeager Theatre, Lents. The cast consists of the best amateur talent of Portland and the management of R. J. Clary in the leading role of "Bill Fuller," the hero, and directed

R. J. CLARY

G. E. REYNOLDS.

by G. E. Reynolds in character part of General Fuller. Mr. Reynolds is playing with the Baker Stock players this week. The play is a scream and extremely well acted. It has made a big hit on several occasions about Portland. Mrs. Fred Reynolds of Park Rose Dramatic Club wears four extremely handsome gowns as the leading lady. The Utopia Glee Club has been engaged to render several vocal selections between acts. It is for a good cause and popular prices prevail. Earl Williams, local Portsmouth lad, is comedian and captures his audience every time. The play is one serial after another.

Portland Union stock yards will have a new building to cost \$150,000.

Petitions are out for a \$700,000 bond issue to construct 40 miles of hard-surface road north and south through Lane County.

Reports say that an electric line will be built from Salem to Bend via Mill City and Minto Pass.

STATEMENT of the financial condition of THE MULTNOMAH STATE BANK at Lents, in the State of Oregon, at the close of business Mar. 7, 1916.

RESOURCES	
Loans and discounts	\$ 38,627 26
Overdrafts, secured and unsecured	36 41
Bonds and warrants	18,327 80
Furniture and fixtures	4,000 00
Other real estate owned	7,505 52
Due from approved reserve banks	7,505 81
Checks and other cash items	176 50
Cash on hand	2,800 20
Expenses	63 00
TOTAL	\$ 77,444 10

LIABILITIES	
Capital stock paid in	\$ 15,000 00
Surplus fund	1,500 00
Postal savings bank deposits	12,124 24
Individual deposits subject to check	\$56,796 94
Demand certificates of deposit	1,081 14
Cashier checks outstanding	281 88
TOTAL	\$ 77,444 10

State of Oregon,
County of Multnomah,
I, H. E. Boyd, Cashier of the above named bank, do solemnly swear that the above statement is true to the best of my knowledge and belief.
H. E. Boyd, Cashier.
