GOOD BOOKS FOR THE CHILDREN TO READ

The following list of suggestions for children's reading is not a list of books recently published, but books for boys and girls that are always new. They may be obtained at the Lents branch library.

"Water Babies," by Charles Kingsley. Three generations of children have found this story of a poor little chimney sweep who was carried away by a good fairy to the world beneath the water, one of the most delightful of juvenile classics. The book is beautifully illustrated in colors and in black and white.

The "Twins" Books, by Lucy Perkins. The author has a way of making her children very real, and whether from the frozen north or sunny Mexico, they are the same busy and humorous little ones that we know ourselves.

"The Peterkin Papers," by Lucretia P. Hale. This is a story of the most amusing adventures of a large family. All should grow up with these laughable, wholesome stories.

"The Wonderful Adventure of Nils," by Selma Lagerlof. A wonderful dream story of a boy who flew away on the back of a goose, written by Sweden's greatest living novelist. It is one of the most valuable of all collections of fairy tales.

"Lorna Doon," by R. D. Blackmore. A wholesome, vigorous story of strong John Ridd and the outlawed Doones. This book has taken its place among the best of romances for young people. The book has been illustrated by artists of established reputation.

"The Basket Woman," by Austin. Telling of the customs and beliefs of the Ute Indians. The author has woven into her stories much of the poetic and melancholy spirit of life in the great western deserts. This is a good book to read aloud.

"Lance of Kanana," by H. W. French. How Kanana, a Bedouin boy, despised for his supposed cowardice, rescued his beloved country, Arabia. Portrays the finest type of heroism and patriotism for boys.

D. A. THOMPSON WILL LECTURE AT LIBRARY

Tuesday evening, March 9, at the Lents branch library, the Rev. D. A. Thompson of the Mizpah Presbyterian church will give an "amateur's lecture to amateurs" on the "Relative Size and Positions of Planets." Mr. Thompson, who is a Princeton man, has made a study of the sky for his own pleasure and information and he will try to give in an untechnical and interesting way such data as will be of real use to boys and girls of grammar or high school age, and also to grown folks who like to be informed on astronomy. He will use Herschel's illustrations and will discuss such phases of the subject as the composition of the planets and the nebular hypothesis. Cards will be in the library relative to the lecture, and there will be book lists for reference. Stellar distances will be illustrated by movements of familiar objects such as fast trains. All are cordially invited.
