### Seed Oats for Sale

I have good clean white oats for sale at 2 cents a pound at the granary.

Albert Hornbeck, Sisters, Ore. 3713

## ENDOCARDITIS.

Forms and Dangers of This Affection of the Heart.

By "endocarditis" is meant an inflammation of the endocardium or membrane lining the cavities of the heart. It is caused by the presence of poisonous material, usually of living germs, in the blood and is therefore most often associated with or a consequence of some general disease, such as rheumatism, typhoid fever, scarlet fever, diphtheria or pneumonia.

There are the usual two forms found in most diseases, acute and chronic, the last following upon the first, and there are also the more important divisions into simple and malignant endocarditis.

In the simple kind the lining membrane of the heart presents numerous points of inflammation—little red areas with a tuft or ball of fibrin, or clotted blood, in the center. These inflamed spots are not large, and the clots attached to them are also small in the simple form. But in malignant endocarditis the area inflamed is much more extensive, and the clots are larger, sometimes almost filling the cavity of the heart. In some cases of malignant endocarditis, then called ulcerative endocarditis, the inflammation is so acute as to cause ulceration of the affected parts.

The dangers of endocarditis are twofold—danger to the heart itself and danger to the brain or lungs or one of the other organs of the body. The danger to the heart is from injury to one of the valves. This almost always happens except in the mildest form of endocarditis, because the inflammation most often affects the edges of the valves. Even when the disease subsides without giving any sign of valvular injury at first, this often appears later through a fibrous thickening or scarlike contraction of the part originally inflamed. This interferes with the complete closure of the valve, and the result is a heart permanently crippled by valvular disease.

When there is actual ulceration of the valves injury is inevitable.

The danger to the brain or other organ is from detachment of the little blood clot from the inflamed spot and its carriage into the general circulation, where it plugs one of the smaller arteries. If this happens in the brain it gives rise to symptoms of apoplexy.

The first principle of treatment is absolute rest in bed, and this inaction must be insisted upon long after the patient feels well and is well, and for the rest of life anything that may cause heart strain must be carefully avoided.—Youth's Companion.

### The First Law of Nature.

Two Irish soldiers stationed in the West Indies were accustomed to bathe daily in a little bay which was generally supposed to be free from sharks. Though on good terms with each other, they were not what might be called fast friends.

One day as they were swimming about 100 yards from the shore Pat observed Mike suddenly making for the land as hard as he could without saying a word. Wondering what was the matter, Pat struck out vigorously after him and landed at his companion's heels.

"Is there anything wrong wid ye?" inquired Pat feelingly.

"Nothin', nothin' at all," replied the other.

"Thin what did you make such a suddint retreat for an' lave me?" continued Pat.

"Bedad," answered Mike coolly. "I spied the fin av a big shark about twenty feet ahead, an' I thought while he was playin' wid you it would give me time to reach the shore."

### The Nebulae.

The discovery of the gaseous nature of the nebulae came about largely through the use of the spectroscopic and spectrum analysis. Fraunhofer proved that the spectrum of an ignited gaseous body is "noncontinuous, with interrupting lines," and J. W. Draper demonstrated that the spectrum of an ignited solid is always continuous, with no interrupting lines. In this way it was proved that many of the nebulae are gaseous, illustrating the process of development actually going on.—New York American.

### No Race Suicide.

There are many anecdotes of actors and playwrights in the recollections of Sir Squire and Lady Bancroft. Some of these, of course, originate with the always amusing H. J. Byron. To a provincial landlady he once bitterly complained of having been attacked by fleas.

"Fleas, sir?" was the retort. "I am sure there is not a single flea in my house."

"I am sure of it, too," was Byron's rejoinder. "They are all married and have large families."

## AN AUSTRALIAN TORNADO.

The Show as Seen From a Reserved Front Seat.

The tornado of Australia is related pretty nearly to the same phenomenon in this country. It is on the land what the typhoon is in eastern waters. The storm of wind and rain is preceded by an unnatural stillness and silence of the elements. Sensitive persons and animals are aware of the approaching storm. The author of "Parts of the Pacific," who calls himself "a peripatetic parson," experienced one such gale when he was at the house of a friend in the northern part of Australia, very near the equator. His account is humorous as well as instructive.

By and by there came across the night air a distant roaring noise. The stillness of the slumbering hours was broken. Something terrible was at hand, as had been foretold by the clerk of the weather. The wind began to moan, then to whistle, then to bellow. The roof rattled, the trees shrieked, rain rushed and hissed, lightning blazed, and thunder crashed and boomed.

All the household was busy holding on to goods and catching things as they were hurled off by the violence of the storm. The roof was ripped up and carried away. Shutters and doors, walls and furniture—off they went, and people raced after them to the rescue. All were at work, myself included.

I had a bad leg coming on, and, considering the bed to be the most valuable article in any part of the house, I right manfully lay in it and so held it down. From the comfortable bed I watched the roof go off, piece by piece. From it I saw the slabs and boards go—I saw everything go until there was nothing left at my side of the house but me and my noble bed.

Together we weathered the storm bravely. Together we remained in the torrents of rain and in the blinding lightning, littered with broken timber, hornets' nests, oranges, bits of furniture from the next room, pomelos and guavas, boughs of trees and sundry other things.

I had never before witnessed a tornado, and the kind bed generously afforded me a front seat on the brow of the hill, from which the whole show was seen splendidly. Moreover, as you do not always require a roof over your head in that country, it was a mere trifle being left without one on a night like that.

When the storm ceased and daylight forced itself in a measure through the still inclement weather it was strange to see the river a long way up the lawn, spreading its turbid waters over the plain which we had traversed only the day before right up to the foot of every three were blown down, and no leaves were left on any. Water was running everywhere, and the bright, peaceful scene of yesterday was now an expanse of dull gray and wholesale desolation.

### Appropriate.

There was a great discussion in progress among the members of the faculty of a certain college. They wrangled long and raised their voices to too high a pitch, each eager to have the measure in question embody his particular variation of the idea. Finally a professor of large mind and calm voice, who had been silent, rose and made a tactful, conciliatory speech. As the effect of his words began to show in the peaceful quiet that settled over the fidgeting members, another professor, who also took things calmly, turned to his neighbor and whispered the line from Kipling:

The oil can soothes the worrying cranks.

When the speaker had finished the more aggressive members took up the discussion again. Presently the professor who had Kipling in mind leaned over once more and quoted the line from "McAndrew's Hymn":

And now the main eccentrics start their quarrel.

### The Almanac.

The word "almanac" is derived from the Arabic "aland manah," which means to count and thus aptly applies to measurements of time. In ancient days almanacs were employed by the Alexandrian Greeks, but it is uncertain as to when they were actually introduced in Europe. In 1150 A. D. Solomon Jarchus issued an almanac in script, but the first printed one was brought to Vienna in 1457 by the great astronomer, Purbach. The most celebrated almanac maker was an adept in the so called black art, Nostradamus, and since his time, somewhere toward the middle of the fifteenth century, almanacs with predictions have been in vogue, and their pictorial prophecies and weather lore have invariably appealed to a large number of people.

# "The Palace"

## OPEN DAY and NIGHT

Special Attention Given to Automobile Parties.

Come and see me When Hungry,  
Cor. 7th and E Sts., REDMOND, ORE.

F. M. BUNKER, Prop'r.
