**DO YOU WANT A GOOD FARM HOME**

I offer for sale my farm (80 acres of Carey Act land, 51 acres irrigable, and 160 acres of deeded government land) 3 1/2 miles southwest of Redmond at the northwest slope of Forked Horn butte.  
All fenced and cross-fenced, 22 acres cleared, on main public road and telephone line; a beautiful location with fine view of mountains.  
On this land are two well-built stone houses of 5 and 8 rooms, a large stone barn, a smaller frame barn, a stone root house, 100-barrel cistern, 2 1/2 acres of orchard ready to bear, 3 acres of grapes—bore a few last year.  
Exceptionally free from frost; for the past few years the earliest frosts were Oct. 14, Oct. 27, Oct. 25 and Oct. 17, and I successfully raise corn, beans, squash, pumpkins and melons.  
Will divide and sell either part for \$6,500, or the whole for \$12,500; half cash, balance on time.

**WHY DOES NOT PAPER BURN?**

Very Simple and Safe Experiment Will Afford Much Amusement and Set One to Thinking.

Take a piece of paper—ordinary writing paper will do—and fold it so as to make a box, and as you bring the corners round, fasten a piece of string in each corner securely. This will help to keep the corners in place and will serve to hang it with over the flame or the fire. When it is made, put some water in—the quality need only be governed by the strength of the box—hang it over a fire, and it will not be long before it will be boiling. An alcohol lamp is best because you can set it on the table and hold

the box above it, and all present may watch the proceeding. This is a very simple and safe experiment, and it will afford much amusement and set you thinking, too, how wonderful it is. What is the reason why the paper does not burn? The reason is that the heat of the flame is absorbed by the water so fast that it keeps the temperature of the paper below the point where it can take fire. Virtually the same principle is used in the biggest steam boilers. So long as there is plenty of water in the boiler the fire will not hurt it, but let the water get too low and the heat will be absorbed by the boiler and there will be an explosion.

**PARACHUTE TOY IS AMUSING**

Indiana Man Invents New Plaything Consisting of Globular Casing, Held Closed by Catch.

An amusing toy has been devised by two Indiana men. It consists of a globular casing, hinged at one point and held closed by a catch. Inside this casing is packed a parachute, with a small ball for a weight. The catch of the receptacle is held shut by a pin, which is unwound and allowed to lie loose on the ground so it will pay out freely and the ball thrown as high into the air as it will go. When it comes to the end of the cord the pin will be jerked out and the shell will fly open. This will release the para-

New Parachute Toy.

chute and the weight of the latter will at once straighten the little floater out, whereupon all will descend gently to the earth, the shell preceding it, to be ready for another throw.

**A Real Handy Tree.**

Did you ever hear of a thread and needle tree? It is rather a handy tree to have growing in the back yard, don't you think? Especially when there are boys in the house with buttons coming off about every other minute.

This strange tree grows in nearly all tropical countries and in some places nearer home where the climate is warm. It gets its name by which we know it from the curious formation of its leaves. At the tip of the leaf there is a sharp thorn, which is the needle. If you grasp it firmly and pull it out, there you are with a needle already threaded for your sewing. This fiber thread is very strong and the Mexicans use it for weaving a coarse kind of cloth as well as for sewing.

**As Per Custom.**

Little James had been imparting to the minister the important and cheerful information that his father had got a new set of false teeth. "Indeed," James, replied the minister, indulgently. "And what will he do with the old set?" "Oh, I s'pose," replied little James, "they'll cut 'em down and make me wear 'em."

**INFERTILE EGGS KEEP BEST**

Large Part of Loss Can Be Obviated, According to Investigation Just Completed.

A large part of the heavy loss from bad eggs can be obviated by the production of infertile eggs. This has been demonstrated beyond a doubt by the investigations concerning the improvement of the farm egg which during the past two years have been conducted in the middle west by the bureau of animal industry of the department of agriculture.

Secretary Wilson of the department of agriculture estimates that, between the producer and the consumer, there is an annual loss of \$45,000,000 in the egg crop of the United States, the greater portion of which falls on the farmer, who is by far the largest producer. Of this enormous loss, about one-third, or \$15,000,000, is caused by heat which develops the embryo of the fertile egg, causing what is known to the trade as a "blood ring." As it is impossible to produce a "blood ring" in an infertile egg, such an egg will stand a higher degree of temperature without serious deterioration than will a fertile egg.

The secretary says that if farmers and others engaged in the production of eggs would market their male birds as soon as the hatching season is over, a large saving would be made, as practically every infertile egg would grade a first or second if clean and promptly marketed.

No more simple or efficient method for the improvement of the egg supply of the country could be adopted than the production of infertile eggs.

**Well Informed.**

"My good man," said the hesitant philanthropist, "I would be glad to give you a quarter, but I am afraid you are too little acquainted with the beneficent properties of soap."

"My dear sir," replied the itinerant one, with a truly Chesterfieldian air, "you do me a great injustice. I have read hundreds of soap advertisements on the bill-boards of this, my native land."
