

EVERY FARM NEEDS HOGS
A GOOD HOG HOUSE MEANS MORE HOG PROFITS

A warm house means earlier farrows and more pigs saved.
A sanitary house means healthier pigs and less disease.
A convenient house means better care and rapid gains.
A well constructed hog house adds value to your farm.

Will Steen, of Milton, Ore., fed one set of pigs in poor quarters, and one set in good "TUM-A-LUM" hogsheds built of

"TUM-A-LUMBER"

and

received from hogs in poor hogsheds, 58 cents per bushel of feed in grain of hogs.

Received from hogs in "TUM-A-LUM" HOGSHEDS, 90 cents per bushel of feed in grain of hogs.

SWEET CLOVER IN THIS
COUNTY SEASON 1915

WILL BE LARGER ACREAGE IN
THE COMING YEAR

Stock Eats the Clover Readily and
But One Loss Has Been Re-
ported From Bloat

Early this spring sweet clover was recommended by me to the farmers for dry land, alkali land and the poorer soils under irrigation. Estimates as to the value of the crop for this section were made and farmers advised to try out small plots planted to the White Blooming Sweet Clover. About 200 acres of sweet clover were planted in Crook county last spring. Blanks for reports upon this crop were sent to all those who had planted it and reports have been received from nearly all of the men. In the majority of cases an entirely satisfactory stand was not obtained, but men sending reports to this effect have usually blamed the time of planting or the method used rather than the crop itself for the unsatisfactory stand obtained. In practically every instance those who planted the crop this season will plant a larger acreage next year.

As a pasture crop farmers have found that stock will eat the sweet clover readily. No losses from bloat have been reported except in one case where one man reports the loss of three sheep from bloat on the clover. This comes as a surprise, but it will be well for those handling the crop in the future to remember this report and watch carefully for indication of bloat when pasturing sweet clover, until we have a larger experience with this crop as pasture. As a hay crop it has been found as acceptable to the stock as alfalfa after they have learned to like it, and very little trouble has been experienced in getting the animals to eat the sweet clover hay.

The failures in obtaining a stand of sweet clover have been caused by planting too late on dry land, having the seed bed too loose, and a blowing out of the crop on very sandy land. On irrigated land the crop was this year planted as late as April 16th, and a good stand and crop obtained. On dry land seed planted after April 1st in no instance gave good returns. The opinion of the men who have tried the crop this year on dry land is that the seed should be planted very early in the season, probably any time after December 1st, and not later than the first of March. If the seed is sprouted and growth of the plant started, the crop will usually live and prosper throughout the season.

Sweet clover is not a "cure-all" or "the only crop" for Crook county. We have, however, this year proven that it may be made a profitable crop for pasture and hay on our farms in this section. The better the land and the more ideal the moisture conditions, the better will be the crop of sweet clover. But the crop will grow and pay on the poorest land, on rocky land and alkali soils, and in places where other crops will not grow. This will probably prove to be its greatest value. If the land is properly prepared and the seed planted early, it will prove a paying crop on dry lands. However, the greatest value to be obtained from this crop in the next few years in Crook county will be the improvement of the soil by adding plant food and humus to the soils where the crop is grown, even though the crop be pastured or raised for hay. This value is obtained because of the large, thick root growth characteristic of the plant, and because of its being one of the legumes which obtain the nitrogen necessary for their growth from the air.

Those looking for a crop to improve their soil for larger production will do well to consider sweet clover. Where other crops already grow luxuriantly, or where a reasonable profit is being obtained from the lands in growing other crops, sweet clover might turn a less profit, and as stated in the beginning, sweet clover is not recommended for all lands and under all conditions above other crops, but when other crops will not pay, or it is desired to improve the soil physically and chemically, sweet clover will prove at least one of the crops that should be planted.

Crook Co. Agriculturist.

DR. NORRIS FOUND GUILTY
OF RAPE AT THE DALLES

The Dalles Chronicle, Oct. 14: The jury in the case of Dr. E. Rea Norris of Bend, returned a verdict of guilty at 8:30 last night, after being out since yesterday noon. Norris was charged with criminally assaulting 15 year old Adell Bell of Crook county. Norris, who also resided in Crook county, brought the trial to this city last July when he committed the crime for which he was convicted. The law provides for a sentence of from three to 20 years for this crime.

(Dr. Norris was convicted at the last term of the circuit court in this county of contributing to the delinquency of a minor with the same girl. He appealed the case.

SEED SELECTION FOR
IMPROVING POTATOES

HILL SELECTION NECESSARY
FOR BEST RESULTS

Pick Out Your Seed When Harvest-
ing This Year's Crop From
Best Specimens

In the selection of seed for practically all farm crops best results can be obtained by using seed from the best producing plant or plants. If this be true with crops whose seed is used for planting, how much more true must it be with a crop like potatoes where the tuber is used for a reproduction of the crop.

In selecting potatoes for the market it is only necessary to have potatoes of marketable size and condition, and it makes no difference whether one or 20 potatoes have been obtained from each hill in the field as far as the price to be obtained is concerned. When choosing potatoes for seed, this seed must be sold on the market. We have not yet come to the point where the buyer will insist that the seed has been obtained from hills yielding any certain number of potatoes, but the man who is raising his own seed and selecting the same for planting, may increase his profits many times by selecting seed from those hills having the larger number of potatoes of uniform size and type.

An increase in yield of one potato weighing 8 ounces to each hill on an acre of land will mean an increase of approximately 2400 pounds of potatoes per acre. This amount of potatoes will bring a fair increase even with potatoes at one-half cent per pound.

There will be a large acreage of potatoes harvested in Crook county during the next two weeks. It will pay every man who expects to plant potatoes next year to go over his patch of potatoes this year before harvesting and select his seed from the best hills of his field. As shown above, an increase of one potato per hill per acre means at least \$12.00 per acre increase in profits. A man can select his seed in one or two days' time, and figuring from this standpoint alone, he will be well repaid for the time spent in choosing his seed potatoes for next year's crop.

In selecting seed potatoes great importance should be attached to the selection of disease-free potatoes. I have been unable to discover or learn of any of the more serious potato diseases in the potatoes in Crook county. If we can keep our potatoes disease-free, we can absolutely depend upon best prices for our potatoes for seed because there are very few sections indeed where potatoes can be found which have as little disease among them as have those of Crook county.

If there are any farmers raising potatoes who are not informed as to the best types of different varieties of potatoes, they may learn these things at the fairs in the county, and more especially at the Redmond Potato Show, where a large number of each variety will be shown.

I shall be glad to assist any of the farmers interested in the selection of their potatoes for seed. Save only the best, and only the best from the best yielding hills.

A. E. LOVETT,
Crook Co. Agriculturist.

PERSONAL

C. L. Shattuck of Prineville, general superintendent of the Deschutes Power Co., was here several days last week of business for the company.

L. E. Smith returned last Friday from Portland where he went as a delegate to the K. P. Grand Lodge convention.

M. A. Lynch was one of the Redmond contingent who visited the Sisters fair last Friday.

J. W. Brewer of Portland, and A. E. Lovett, county agriculturist, attended the Sisters fair last Friday.

J. O. Cobb and Herman J. Love of this city, were visitors at the Sisters fair last Friday and Saturday.

A. G. Allingham of this city, took in the Sisters fair last Friday and Saturday.

C. H. Miller, supt. of the local telephone company, was a Saturday visitor at the Sisters fair.

Dr. C. A. Cline of Redmond, was an interested visitor at the Sisters fair while it was in session last week.

F. W. McCaffery of this city, attended the fair at Sisters last week. Wm. Leavitt was over to the Sisters fair last week Friday and Saturday to see the horse racing.

Will H. Bard came in last Friday from his gold mill at Lower Bridge and went to Portland. He will return today.

Claude Christ of this city, was an interested spectator at the races at the Sisters fair.

Jim Green was a Redmond visitor to the Sisters fair last week.

The Spokesman and the Portland Evening Telegram one year, both for only \$4.00.

THANKS FOR THE BOOST
GIVEN THE POTATO SHOW

The Bend Press of last week had the following kind words to say in regard to the Redmond Potato Show and Fair to be held here this week: "The Redmond Potato Show opens next Thursday and continues the balance of the week. Our sister city is making of an enviable reputation as the center of a potato growing district, having captured the contract for furnishing the potatoes for the dining car service of the Great Northern Ry. which advertises itself as the "Great Big Baked Potato Line." There will be races, sports and all kinds of amusements every day and Bend should put herself out a little, if necessary, to visit the fair—for you remember Redmond responded to our invitation to attend our Chautauqua in large numbers."

The Press is the only paper in the county to call an extended mention to the coming Potato Show in this city, although the Redmond people have been lavish in their attendance to all the other fairs in the county, and especially at the county fair at Prineville. The silence of the county press as regards Redmond's annual event has been noticeable.
