While we were wending our peaceful way down Third Street Monday morning we were stopped by our fellowcitizen, G. D. Trotter and warned emphatically that we must not print his name again in The Stayton Mail. We have no idea of carrying out other people's orders so long as we are at the head of this publication and expect to use any name that comes up and is in any way connected with news in any way we see fit.

We have no wish or expectation to butt into the private affairs of any citizen of this town. Since we have been in Stayton we have played the game square. There are no strings attached to the Stayton Mail, and anyone who seeks to intimidate us in the least is "barking up the wrong tree." The Editor.

BADLY BURNED WITH GASOLINE

Last Thursday afternoon the people of Stayton were shocked to learn that Miss Mattie Dunagan, while cleaning a pair of gloves with gasoline and while they were still on her hands, had lighted a match and in an instant the treacherous gas was ablaze.

Miss Mattie was severely burned on one arm and shoulder before the fire was extinguished. Dr. Brewer was immediately called and helped relieve the pain as much as possible, but it was a very bad burn. At last reports she was getting along as well as could be expected.

F. I. JONES WAS FOUND NOT GUILTY

In the trial last Friday in the local justice' Court of F. I. Jones for the alleged illegal selling of liquor, he was acquitted by the jury after a very short deliberation by that body. Frank Mack was the prosecuting witness.

FATTENING HOGS

Klamath farmers are fattening hogs on their surplus potato crops. Ten carloads of hogs have been shipped into that district from Sacramento and if the potatoes on hand can be utilized profitably in this way, other large shipments will be made.

I. H. C. Low Spread Manure Spreader

Before you buy come and inspect our Low Spread Manure Spreader. It has an angle steel main frame, one that does not check, shrink or rot. Built like a steel bridge. The main axle is placed so that strain is distributed uniformly over main frame.

Frame Is Not Suspended Between Axles

There is no danger of the wheels slipping even when the machine is spreading on hard or slippery ground, because approximately 75 per cent of the weight of the entire load is carried on the main drive wheels.

Drive wheels are 7 3/4 inches wide which keeps them from cutting into the loose ground, and makes the spreader more suitable for top dressing cultivated fields, and makes it possible to spread when machines with narrow rims are lying idle. Power is uniformly distributed. Both wheels are drivers.

THE LOW SPREAD IS NOT TOO LOW

A good practical machine should have at least 12 inches clearance beneath the apron. This is necessary because a spreader must be used in sloppy barnyards, in fields that are soft, and among stumps and rocks. The Low Spreader, however is constructed so that there is 13 inches of clearance between the apron and the ground. Yet the box is only waist high.

The Low Spread has a return apron with force feed endgate. No racing of apron. No retarding of load. Beater is of large diameter with square chisel pointed teeth. Levers are convenient. Working parts are simple.

NO ENCLOSED GEARING WHICH MIGHT GIVE TROUBLE IF NOT PROPERLY LUBRICATED.

These are only a few of the many good features of the Low Spread. Call and examine it yourself and you'll be convinced that there is no better machine on the market.

MR. FARMER:—Why purchase a machine without a reputation? I. H. C. Spreaders are not experiments. The Test of Time has proven their superiority.
