

Every Woman Should Know

There are three entirely different kinds of baking powder, namely:

- (1) Cream of tartar, derived from grapes;
- (2) Alum, a mineral acid; and
- (3) Phosphate of Lime.

(1) Baking Powders made of Cream of Tartar add to the food the same healthful qualities that exist in the ripe grapes from which Cream of Tartar is derived.

(2) Baking Powders made of Alum add to the food some form of Alum or Aluminum, a heavy metal, wholly foreign to any natural article of food.

(3) Phosphate of Lime is made from rock or by burning bones which by chemical action are changed into a white, powdered acid. It is used in baking powder only because it is a cheaper substitute.

A Cream of Tartar powder never contains Alum or Phosphate.

Every housekeeper should read the names of the ingredients printed on the label and know what she is using.

The Two Angels.

The following allegory is told among the Turks:

Every man has two guardian angels, one on his right shoulder and one on his left. In doing good, the angel on the right shoulder notes it down and sets a seal upon it, for what is done is done forever. When evil is committed the angel on the left shoulder writes it down, but he waits until midnight before he seals it. If by that time the man bows his head and says, "Gracious Allah, I have sinned; forgive me!" the angel blots out the fault, but if not he seals it at midnight, and then the angel on the right shoulder weeps.
