

Why We Are Opposing A Government Armor Plant

To the People:

Some people say that the very fact that the Bethlehem Steel Company is so aggressively fighting the proposal to build a Government armor plant is conclusive proof that the Company is seeking to assure for itself the "vast profits" derived from private manufacture.

The fact is that armor making is the least profitable feature of steel manufacture.

The reason we oppose a Government plant is very simple. It is this:
 Even though there is but little profit in the making of armor, we have invested over \$7,000,000 in our armor plant;
 That plant is useless for any other purpose; if a Government plant is built the usefulness of our plant is destroyed.

It would be good business for us to make armor for the Government at any price over and above the actual shop cost, RATHER THAN SACRIFICE OUR ENTIRE INVESTMENT.

We do not seek to save big profits; our purpose is very frankly to save our armor plant—itsself built solely for the use of the Government—from going to the scrap heap.

To do that, we are prepared to agree for any period to any terms of manufacture which the Federal Trade Commission shall say absolutely protects the Government of the United States.

MODERN NOT "DISC"

UNITED STATES CREAM SEPARATOR

With construction totally different from any of the many "disc" type makes—and as much better as newer and different.

Back of these U. S. improvements are 43 years experience in manufacturing dairy goods and cream separators.

Was the modern labor saving and sanitary improvements you have always needed most, but which no other cream separator has ever been able to supply.

No other Companies' experts have ever studied so closely the defects of all separators, right in farm dairies. The wonderful success of U. S. improvements are the result.

WHAT THE MODERN & "NEEDED MOST" FEATURES ARE

MODERN—Because of Nickel-Silver. Nickel-Silver in the U. S. skimming device makes for easy cleaning, and does away with rust, thereby meeting the requirements of sanitary laws. Steel discs rust badly, contaminate milk and cream, and are hard to keep clean.

MODERN—Because of Vertical Blade System. The "vertical blade" and the "disc" skimming devices are the two systems mostly used in separators. The vertical blade system, as used in the U. S. wholly overcomes defects found in disc bowls. It is the modern system, and fully protected by patents. Separators of disc type, originated long ago, with no recent important improvements.

MODERN—Because Mechanically Washed, Sterilized and Dried. The U. S. is the only separator adapted to mechanical washing. This process also sterilizes and dries the bowl. A mechanical washer free with every Separator.

MODERN—Because no Central Core in Bowl. The U. S. bowl has an open center, without cumbersome central core, split wing, or discs, on, or between which cream lodges. U. S. bowls flush perfectly.

MODERN—Because Uses Bowl Chamber Liner. The U. S. Separator is first to adopt this liner. It makes the separator much easier to clean, and supplies the only way to keep it strictly sanitary. Boards of Health endorse it.

MODERN—Because the U. S. is Self-Draining, never any sloppy mess over person or floor when taking the bowl apart.

The U. S. is the **EASIEST RUNNING** separator because of its small diameter bowl, the superior construction of its gears and shafts, and an ideally effective oiling system. Demonstration gladly given right at your home. No obligation.
