REGULAR FORD WAY

Henry Ford tested the Ford Starter and Lighting System on his own car for one year.

Ten months ago the Ford Motor Company was not manufacturing Electric Starters; today the output of its Starter Department is greater than that of any other manufacturer of electric starting devices in the world. Its nearest competitor makes one thousand a day, whereas the Ford Company's output is fast approaching the three thousand

mark, two thousand eight hundred and eighty one already having been manufactured in one day.

The Ford starter - and generator, for it is really two separate units - is not the result of a new idea or of a sudden decision. More than eight years ago Mr. Henry Ford's vision saw the need and his electrical engineers were instructed to begin experimenting. After seven years of constant research, which took into consideration the many different climates in which the Ford car is used, together with the factors of size and weight and an adapt-

ibility to quantity production, twenty-three trial jobs were built. These were tested in many different ways. Mr. Ford himself used one on his car for a year. Still the engineers continued their experiments and improvements.

When came the order from the Government for 15,000 three-ton tanks, each of which was to be equipped with two synchronized Ford Motors. A starter was essential, so the one now being installed on Ford cars was evolved. But only one starter and generator was used to turn over the two Ford motors in each tank.

January first 1919 the Ford Motor Company began equipping enclosed cars with this new starting system. Ford engineers say that although the entire system - Starter and Generator - weighs only thirty-one pounds, it produces a higher torque output (constant rotary motion) pound for pound, than any other system on the market.

When the department for building the Starter and Lighting Systems first began production, fifty hours labor was charged to each unit, but now that machinery and equipment have been installed, the time per unit is four hours. Two huge armature impregnating ovens have been installed, each with a capacity of 1700 every eight hours. In these ovens the armatures are dried, soaked in varnish and dried again. Eight hours time is required for this one operation.

The power from the motor is applied through the well known Benpex drive, which automatically engages the starter and then, once the motor is started, the starter immediately disengages. It is equipped with oilless bearings and needs practically no attention.

Within another thirty days or six weeks, the Ford Company expects to be making enough starters so that every Ford car will be equipped with the new Electric Starting and Lighting System.

Regular Examination of Children's Eyes

show remarkable results. When supplied with proper glasses, backward children have fairly raced ahead. Class room work has become a pleasure. Dull children have displayed a new vigor and interest in both work and play.

It isn't fair to let your child toil and suffer under the handicap of neglected eyesight. The remedy for this difficulty is in regular examinations. They should be made every six months so that little errors may be corrected in time.

Make Washday Easier

Half the work of farm washing is in pumping and carrying the water. A Milwaukee Air Power Water System does away with this part of washday work, and supplies an abundance of hot water, too, right out of the faucet.

You also can have soft water. And the spring or well water comes direct through the pipes absolutely fresh. No stored water. A water system does away with a lot of hard work about the barn. It's the best investment any farmer can make. Why handle water the hard way by hand when you can handle it better BY MACHINERY?

Ask us about it. Call or phone.

SILVERTON, OREGON

There is an "Exide" Battery for Your Car

and it will give "punch" and "pep" to your starting system. The space saving "Unit Seal" construction gives extra plate surface—hence greater capacity per unit of weight and volume. This means built-in durability and power. Let us show you your "Exide" Battery and explain its special features.

For battery testing, filling or expert battery advice come to our

"Exide" Service Station

This service is free to all battery users. Repairs, the prompt and satisfactory kind, on any make of battery at the right price.

STOMACH TROUBLES

AN IRRITABLE, fault finding disposition is often due to a disordered stomach. A man with good digestion is nearly always good natured. A great many have been permanently cured of stomach troubles by Chamberlain's Tablets after years of suffering. These tablets strengthen the stomach and enable it to perform its functions naturally. Try them. They only cost a quarter.
