# Women Who have the Blues

Despondency in women is a mental condition directly traceable to some distinctly female III. Well women don't have the blues, but comparatively few people under stand that the right medioine will drive them away.

Lydia E. Pinkham's Vegetable Compound

overcomes the blues, because it is the safeguard of woman's health.

It regulates the entire female organism as nothing else does. When the dragging sensation and the backache go, the blues will go also.

Read the letters from women appoaring in this paper women who have tried it and know. There are a million such women.

## CHANCE FOR INVESTORS.

#### Flattering Report Upon the Property of the Chiapas Plantation and Investment Co.

The report of the committee of business men sent to Mexico to investigate the property of the Chiapas Rubber Plantation and Investment Company has just been made public. The docu-ment is an interesting one and gives valuable data concerning the enterprise conducted by the company named.

The property of the company consists of a plantation of 24,000 acres of the holoest rabber land of Mexico, upon which over 700,000 vigorous young rubber trees now thrive. On the plantation also are numerons mahogany trees, some of which are of predigious growth, thus demonstrating the rich-ness of the soil. The property is located in the department of Palenque, state of Chiapas, and it is unquestionably adapted to the productions of rub-ber and the growth of hardwood timber trees of great variety. The committee of investigation com

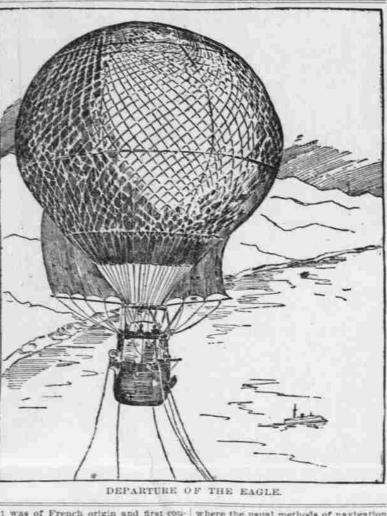

sisted of Judge Lucien Shaw, Post-master O. W. Mauleby, Rev., L. M. Hartley, of Redlands, Cal.; E. A. Girvin and C. A. Westenberg. They visited the property during the current year, and in their report the informa-tion is vouchsafed that the rubber tree of the variety known as the Castilloa Elastica is indigenous to the country and especially to the lands lying alon, the river Michel, on which the property of the company has a wide front-Under one of these trees 1,467 roung rabber plants were counted, all of which had spronted from the seed hat had fallen from the tree during the present year. The trees b in their fifth year, and may be safely tapped the year following. Nurseries a hean established for the propagation of rubber trees, and all are now on the property, and his careful

SWEDISH AERONAUT THOUGHT TO HAVE PERISHED. Daring Explorer Yields Life in Search of Far-Away Arctic Pole-There Is No News of the Missing Man During

the Past Four Years. It is now nearly four years since S. A. Andree, the Swedish aeronaut, in his balloon rose in air on Ainsterdam Isl-aud and confidently set out for the

and and confidently set out for the north pole. To him was attracted at once the hopeful and the anxioms notice of both the scientific and the unscien-tific in every country. It was the most wonderfully daring attempt ever con-ceived of in aeronautics and it abso-lutely eclipsed all previous enterprises conducted in ships and looking to the discovery of the north pole. Mr. Andrese had been known as an aer-onaut for twenty years, but he was something more than that. He was a theoretical mechanic, whose theories utes. It is certain that Mr. Andree did not take sufficiently into account all the meteorological conditions. But at least four learned professors did take them

into view on their comments at the escretical mechanic, whose theories time on Mr. Andree's daring venture. Professor Bezold held that as the winds any other man's in Sweden. He was at the pole cross one another a direct eed more than a theorist-he had passage could not be hoped for. He rate knowledge of the practical argued that the distance the aeronaut and inventions of his time. So were his knowledge and abilities 3.400 kilometers (the distance in a dipointed him chief engineer of the polar region) to frem 12,000 to 20,000 partent office. These facts, being gen-erally in possession of the world public, strongly predisposed a large part of hat public to believe that he would be the professor continued, he thought it indecressful in his surpassing acconautic indertaking. Nor was the idea of cross-ng to the pole in a balloon a new one. It is precisely in that part

It was of French origin and first con- where the usual methods of navigation thriving.
