From present appearances the worst of the winter is over as the rain and snow we have had during the past week or ten days has been something wonderful. The snow is all gone from the hills and low mountains and the grass is growing nicely on the hills about town.

The timber claim law will soon be a thing of the past and those who want to take advantage of it would better get a move on themselves. There are thousands of acres of good timber north of here that has not been located by the timber sharks and it will be valuable some of these days.

George Turner was over from Grizzly Friday on legal business. He informed the JOURNAL that some person or persons were in the habit of tying tin cans to horses tails in that part of the county and then turning them loose in the public highway where they frighten passing teams. This part of the country may be somewhat higher than other portions, but we have a warmer atmosphere than some that are lower. This fact is evidenced by the information gained from Knox Huston, who was down at the Warm Spring ferry last week where it snowed no less than two inches in as many hours while here we had a warm rain. It has been so all winter. While to the south of us there were heavy showers of snow we either had a gentle rain or only clouds.

Sunday morning a wonderful phenomenon was observed by a number of our citizens. It was nothing more or less than eruption of Mount Jefferson. When first seen from the JOURNAL office spouts of smoke were coming out of the top at more or less regular intervals, which would float off to the north and after a few seconds rest it would spout forth again, often rising vertically from the top of the mountain to the height of perhaps two or three thousand feet. A number of glasses were brought to bear on the mountain and all those looking through them unhesitatingly proclaimed it smoke. The smoking was observed for about two hours after which the mountain became enveloped in a haze that shut out the view. At first the jets of smoke would come at intervals of one or two minutes and continue for about the same length of time, but at the end of the observation they were about fifteen minutes apart.
