

GRAPES, from their most healthful properties, give ROYAL its active and principal ingredient

ROYAL

Baking Powder

Absolutely Pure

It is economy to use Royal Baking Powder. It saves labor, health and money. Where the best food is required no other baking powder or leavening agent can take the place or do the work of Royal Baking Powder.

"Cubs" Shut Out Bend Juveniles

The Prineville Cubs shut out the juvenile baseball players from the Bend schools on the Prineville grounds last Sunday forenoon, and for themselves rolled up a score of 19 runs.

The visitors were outplayed at every point in the game, and at only one time did they come anywhere near passing a runner over the home plate. On the other hand the Prineville kids could gallop around the diamond almost at will, while their fielding was as nearly perfect as kids ever get to be. Arthur Michel, at center field, for the locals made a couple of phenomenal catches after long runs after flies in his territory, falling each time, but coming up triumphant with the ball firmly grasped in his hand.

Bub Barnes pitched for Prineville and was backed up behind the plate by Robert Lister. Johnson pitched for Bend and Bates caught.

Prineville has a nifty bunch of cubs, who play the game with scrupulousness. That score of 19 to 0 is a feather in their caps.

Buy your shoes at Stewart's; big stock; low prices.

Sheepmen Thank Forest Officers

At the sheepmen's meeting held in Antelope recently twenty-five of the twenty-six range users in that district were present or represented.

At the close of the meeting the following resolution was unanimously adopted, which is indicative of the high regard in which the local forest officers are held by the stockmen with whom they are brought in contact in the administration of their duties:

Mitchell, Ore., May 15, 1909.

Resolved, That the thanks of the wool growers of Wheeler County, Oregon, are hereby tendered to the Hon. A. S. Ireland, and his able assistants for the manner in which they have conducted the matter of distributing the range in the forest reserve, and for the courteous and prompt manner they have given to inquiries and all matters pertaining to their respective offices, during their administration.

Respectfully,
E. R. LAUGHLIN,
L. L. JONES,
R. E. WRIGHT,
Committee.

T. J. Ferguson's Trip Through Texas

T. J. Ferguson, the well known Bear Creek stockman, recently made a trip to Texas, for the purpose of looking into making investments in real estate. While away Mr. Ferguson purchased some property on the outskirts of Houston, Texas. At the request of a friend he has sent the Journal a brief description of his trip, which we gladly publish.

"I boarded the train in Portland at 7:45 p. m., and passed through the Willamette and Umpqua Valleys in the night. About nine o'clock next morning we entered the Rogue River valley. This is a very fertile region, dotted with orchards, and many towns that are growing very rapidly.

"To the south we crossed the Siskiyou mountains at an elevation of 4125 feet and the climb up the height made slow travel, but the scenery was very enjoyable to me as well as other passengers. After crossing the mountains we passed Shasta Springs. The train stops here long enough for the passengers to get out and drink some of the mineral water from the springs. On the second morning we reached Sacramento at about 7 o'clock, after which we passed through the famous oil field. There were many oil wells in sight of the train.

"On reaching Oakland, we ferried across to San Francisco, where I laid over for six hours. While there I looked around the city. This was on Sunday but work on the big new buildings was going ahead the same as on any other day. The city is being re-built very fast, but it will be some time before it is back to the place it was before the earthquake.

"We went down the coast from San Francisco by rail, the Pacific being in view part of the time. We reached Los Angeles at 9 next day and laid over there three hours. Los Angeles impressed me a great deal. Would like to live there if I could afford it.

"From here I pulled on toward Texas. The route ran through the orange country and the orchards along side were loaded with ripe oranges. This fruit sold in Los Angeles at from 5 cents a dozen and up. When we passed into Arizona the thermometer got up to 100 in the shade. Perspiration flowed free when one moved about much. Through Arizona one sees many Mexicans in the towns along the road.

"I stopped off in El Paso, Texas. This is an up-to-date town, and negroes and Mexicans make up a large percentage of the population. The country about here is mostly devoted to stock raising. I headed on for Houston, and enroute passed through a great deal of dry country.

"Houston is a fine city of 100,000 population. About 40 per cent of the people are colored, and the colored people do most all the work. This city is growing very fast. Work is in progress on several ten-story buildings and on one or two sixteen-story buildings. Sixteen daily trains pass through this place. Ships also run up the bayou from Galveston to Houston, Galveston being 51 miles south. Houston is located in what is called the rain belt, the precipitation being 40 inches here. The products of the surrounding country are rice, cotton, corn, alfalfa, sugar cane, fruits and vegetable of all kinds, and livestock. There are also oil fields northeast of Houston.

"The elevation here is 74 feet above sea-level, and the climate is claimed to be very healthy.

"One thing in Houston that interested me considerably was the public market building, extending entirely across a block. Here from sixty to ninety wagon and hack loads of vegetables are unloaded every day, tomatoes, cucumbers, beans and all kinds of vegetables except corn, which was not yet large enough to market. Meat and fish markets were also in the building, and one dry goods department.

"The soil about Houston is a gray, sandy loam. Just outside the limits of the city it sells at about \$200 per acre, 15 miles away land can be bought in good sized tracts at \$30 to \$40 per acre and 50 miles away land can be bought in tracts as low as \$6 per acre.

"The school land that is advertised so much will be put on the market the first of June. The lowest it can be sold at is from \$1 to \$5 per acre, but if two or more parties want to bid on it it can be run up as high as \$20 per acre. The real estate men know where all the land is located, and have a great advantage over any outside party in buying.

"In the next issue will try to tell something about the central and northwestern parts of Texas."

T. J. FERGUSON.

A HANDY HENHOUSE.

If Cheap John is bound to build of pine boxes, let him manage his own funeral.

If you're only in to be out, any old shack will do.

If you're a stayer, you're not employing a funeral director architect.

Here is a neat, handy house that may be built for a moderate price and is especially adapted to cold climates, though the bare plan is standard for any locality.

Dimensions, nine feet high in front, seven back, twelve feet wide and any length.

Sink stone for foundation below frost and have two courses of stone at least above surface.

We use brick above ground for rats. Make floor of deep soaked packed cement topped with gravel, sand and cement and cover with boards in winter.

Cover substantial frame with rough boards, cover these outside with two ply tar paper and then nail on the weather boards.

A dead air space will be formed when lath is placed. Plaster with cement. Roof with shingles or galvanized iron. The ventilators should be placed above the windows, the entrances for man and fowl where most convenient, but no alleys or aisles should be made through the building to waste space.

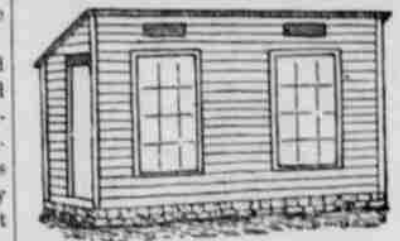

Does it pay to build a house like this for chickens? Well, does it pay you to buy a good all wool suit or an imitation wool shoddy that soon bags at the knees and goes to the rag bag?

If you're going to make good money out of hens, you must put good money into good pens.

Yes, there are some deserted poultry plants around the country, just as there are some forsaken factory buildings here and there.

Most of these forsaken edifices are monuments to men who did their looking after they leaped. "I will watch your experiment with interest and if you are successful may go into the business myself," said a Washington gentleman to a young man who had established a modern plant.

"This is not an experiment," replied the poultry fellow. "This is not a try or test case. There's no maybe about it. Before we went into this business we demonstrated the practical worth of our methods. We worked on the plan of this plant for five years before a nail was driven, and now, if my bones don't crack, we'll have success." That reply should be framed in gold and its spirit followed.

HANDY HENHOUSE.

FEATHERS AND EGGSHELLS. Mice do love to nest with the pigeons.

If you come home and find little squabs and eggs on the floor and can't understand it, it is because you have unmated birds in your pen and don't know it. You'll get the full meaning when you look in the ledger.

If some of our poultry journals that spend extra time and money on crowding their pages with big pictures would only remember that the majority of journal readers are after practical information they would confer a big favor on the majority and insure renewals.

A York poultryman placed rat poison beneath his buildings for the rats, and the rats carried it out and fed it to the chickens, and they deceased. If polchickens are mixed with chop, it cannot be distributed. If a hen does get a dose, just give her a big dose of lard.

If fattening fowls of nervous temperament, like the Leghorns and Anconas, do not keep them in a glaring light, but in semi-dark pens in secluded spots.

Do not keep ducks in a yard where water runs from the eaves. They will puddle along the foundation and loosen the stonework.

In searching for the assets of a Pennsylvania cashier who stole \$50,000 they found a \$1,200 henhouse, but no depositors' nest eggs, and the golden eggs his goose laid were missing.

Parties in Mount Joy, Pa. shipped 5,000 worms to Forrest Park, St. Louis, to be fed to the birds at a cost of \$3.75. It was worth that to count the wrigglers. To our friends who are raising birds, quail and pheasants we recommend the meal worm. Mix chop and bran and strips of leather together, get a few worms at the mill, add them to the combination and watch them multiply.

When you operate on a fowl for hard crop or find an open wound, be sure to use a strong disinfectant on the bared flesh to kill the germs and drive off the blowflies.

Women are more and more taking an active part in poultry work. Among these are a number who have broken in health or whose husbands have been disabled by accident or paralytic strokes, and they have taken up the work of support. We wish them well, and may they meet no male falcons in their path.

Do not use expensive lumber for nest boxes. It is a good plan occasionally to burn the nest material in the boxes. That kills the bugs, and box can be used again.

L. M. Farnitz.

You Will Need an Oil Stove

When warm days and the kitchen fire make cooking a burden—then is the time to try a New Perfection Wick Blue Flame Oil Cook-Stove.

Marvelous how this stove does away with kitchen discomforts—how cool it keeps the room in comparison with conditions when the coal fire was burning. The

NEW PERFECTION

Wick Blue Flame Oil Cook-Stove

is the only oil stove built with a CABINET TOP for holding plates and keeping food hot after cooking. Also has useful drop shelves on which to stand the coffee pot or teapot after removing from burner. Fitted with two nicked racks for towels. A marvel of comfort, simplicity and convenience. Made in three sizes—with or without Cabinet Top. If not with your dealer, write our nearest agency.

The **Rayo Lamp** Just such a lamp as every one wants—handsome enough for the parlor; strong enough for the kitchen, camp or cottage; bright enough for every occasion. If not with your dealer, write our nearest agency.
