The Hillman townsite people, known as the Crook County Investment Co. are very busy at this time. They put their property on the market some time last week, and the plots which have just come to hand to the Realty Development Co., their local agents, show that about a thousand of the lots in the 400 acre townsite are already sold. Walter Ruble was in town the last of the week from his home near Culver attending to business matters. Mr. Ruble states that representatives of the Idaho capitalists who have recently had surveys and measurements of the flows of water from Crescent Lake, have been in the Culver section recently urging the owners of land there to sign up for water for irrigation. Mr. Ruble states that there will be no hesitancy on the part of the ranchers to take water when they see that the project is feasible, but adds that many of them believe the object of the promoters is to secure power rights along the Deschutes inasmuch as the irrigation project would supply water to only a comparatively small acreage, by taking the water out of the Deschutes at Cline Falls, as is proposed.

THE 1909 MODEL UNITED STATES Cream Separator

bowls are greatly reduced in diameter and prove by their clean skimming records, durability and the superior excellence of their work, the correctness of the principles upon which they are built and the perfection of material and workmanship which produce them.

You can buy a separator for less money than the United States—that every dairyman knows. But consider this:

When a U. S. is bought and paid for, it is paid for.

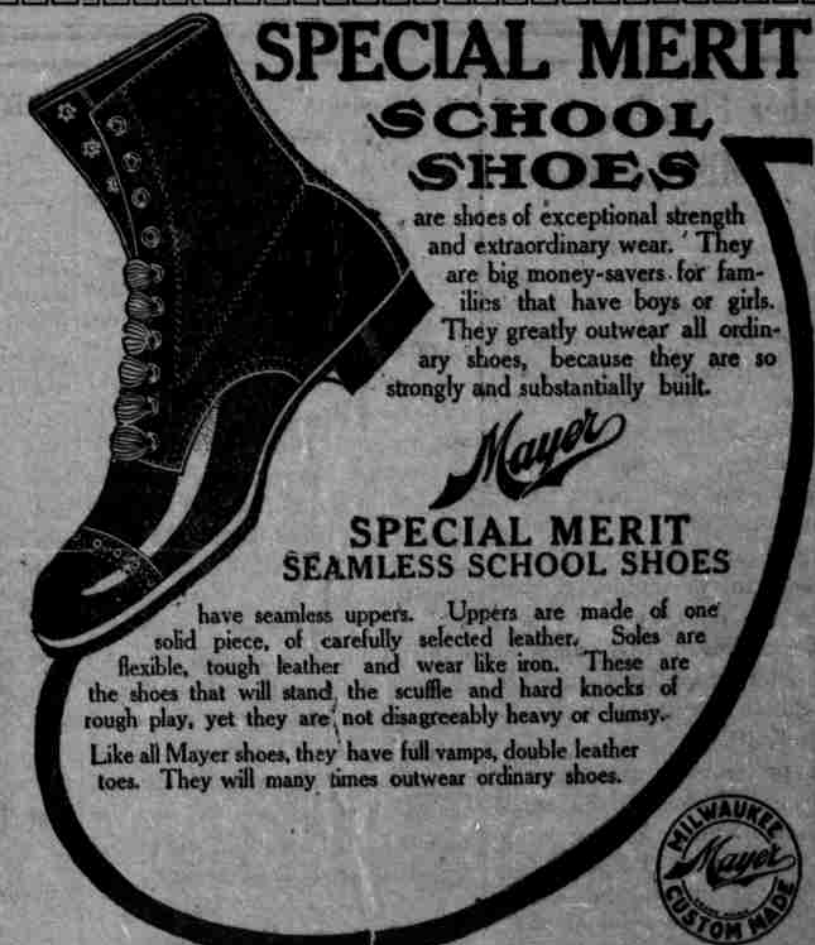

A cheap machine is never paid for. Every cent expended for repairs must be added to the original cost—it's an endless system of instalments. These instalments, added to the first cost of the machine, soon exceed the cost of the U. S., and after each successive repair, (if you can get another part) the cheap machine grows more and more second-hand—one step nearer the junk heap.

The loss of cream, cost of repairs, time lost, the trouble and worry outweigh many times over the difference in cost between the "cheap" separator and the clean skimming, Reliable, Substantial United States Cream Separator. Examine the U. S. yourself and see its good points.

are shoes of exceptional strength and extraordinary wear. They are big money-savers for families that have boys or girls. They greatly outwear all ordinary shoes, because they are so strongly and substantially built.

Mayer

SPECIAL MERIT SEAMLESS SCHOOL SHOES

have seamless uppers. Uppers are made of one solid piece, of carefully selected leather. Soles are flexible, tough leather and wear like iron. These are the shoes that will stand the scuffle and hard knocks of rough play, yet they are not disagreeably heavy or clumsy. Like all Mayer shoes, they have full vamps, double leather toes. They will many times outwear ordinary shoes.
