

## B. S. & L. Co. Charged with Fraud

Suit has been filed in the United States court by J. R. Wyatt, deputy United States district attorney, against the Baldwin Sheep & Land company, one of the largest corporations of its kind in the state, and others, charging conspiracy to illegally obtain title to government land. Besides the sheep and land company, J. W. Robinson, agent for the company, Howard Pinnell, Gerald Booth and Lewis Tomlinson, entrymen, are also named as respondents.

By reason of the fact that the statute of limitations in the matter of direct criminal action in the case has expired, Mr. Wyatt filed a petition to cancel the title of the sheep and land company to 480 acres in Crook county. More actions of the kind may follow.

Conspirators in the case are named as the Baldwin Sheep & Land company, Jack E. Edwards, J. W. Robinson and Judd Van Houten. Mr. Wyatt said today that the matter would have been brought before the federal grand jury for investigation, had not the statute of limitations expired.

Accusations in the case are almost identical in nature to those in the majority of land fraud cases in Oregon. It is definitely charged that agreements were entered into between the sheep and land company and its agents with the entrymen, for filing on homesteads and grazing tracts and that certain amounts were either advanced to the entrymen pursuant to the terms of the agreement, or arrangements were made for turning over the lands on or near the date of final proof.

The Baldwin Sheep & Land

Demonstrator of Psychology  
Power of Mind

company's extensive holdings of Crook county land were sold to a local syndicate last month for a figure said to have been about \$450,000. Organizers of the purchasing syndicate were L. B. Menee, James Elwood, Guy M. Standifer, E. J. Daly of Portland, and N. P. Sorenson of Astoria.

The property transferred consists of some 26,000 acres of land on Hay and Trout creeks, south of Shaniko and east of Madras. Improvements on the vast tract are conservatively estimated to be worth \$100,000. They include a large general store and bank.

The new owners intend to irrigate a large portion of the acreage by means of ditches to be supplied from the two big streams that traverse the big domain. This land is adaptable to the raising of alfalfa.

The Deschutes line of the Harriman railroad system runs through the Baldwin ranch. A number of stations will be established on the line within the confines of the property.

The Baldwin Sheep and Land company was established in 1873 by Dr. Baldwin on whose death the property passed into the hands of Jack Edwards and Charles Cartwright. The ranch was in possession of Mr. Edwards alone when it was sold to the syndicate by him.

For years the Baldwin ranch has been known as the home of the finest herd of Rambouillet rams in the world. There are on the ranch at present some 25,000 sheep. The property is to be cut up by the syndicate now in control of it and sold to settlers in small tracts.—Journal.

**Youngs.**

The body of Mr. O'Neil was found by some Indians who were fishing in the Deschutes river. Mr. O'Neil was drowned when the snows melted in January.

A surveyor for the Harriman line lost his life in the Deschutes river last week. He was an able swimmer but at the time his boat overturned, his feet were tangled in a lot of loose line and he had no chance against the swift current of the icy water.

The farmers who planted wheat last fall are having to replant this spring on account of the hard winter. The rye planted in the fall, is up and a fairly good crop is expected.

The enrollment of the school at Lyle

is now fourteen pupils. Last Friday the children gave their teacher, Mrs. McFarland, a peanut show. There were two visitors present and after the last recitation had been heard, the teacher was asked to leave the room and during her absence the children were provided with peanuts with which to shower the teacher, after wishing her many happy returns of the day. Refreshments were served by the visiting ladies, Mrs. Farnsworth and Mrs. McKinley and the children went home hoping the teacher would soon have another birthday.

**KASPARILLA**  
This sterling household remedy has long been recognized as the best and safest blood purifier, the most successful prescription for spring humors and such disorders of the blood as boils, pimples, pustules, blotches, sores and cutaneous eruptions. Kasparilla is admitted to be the best remedy for that lack of energy and the peculiar debility so prevalent during the close of winter and the opening of spring. For derangements of the digestive organs it is a natural corrective, operating directly upon the liver and alimentary canal, gently but persistently stimulating a healthy activity. Its beneficial influence extends, however, to every portion of the system, aiding in the processes of digestion and assimilation of food, promoting a wholesome, natural appetite, correcting sour stomach, bad breath, irregularities of the bowels, constipation and the long list of troubles directly traceable to those unwholesome conditions. Kasparilla dispels drowsiness, headache, backache and despondency due to inactivity of the liver, kidneys and digestive tract. It is a strengthening tonic of the highest value.

## CARE OF MILK.

Keep at a Low Temperature and Little Exposure as Possible.

An authority writes as follows: When nature instituted milk as a food she provided the manner of supplying it in such a way that it should not be exposed to external contamination. Human ingenuity has imitated the method, and when the scientist wants to secure milk in its natural state he inserts a sterilized glass tube into the teat and draws milk into a sterilized bottle.

The point of interest to the dairy farmer in this is that milk taken from a cow in this manner will usually keep fresh and sweet at room temperature for a long time if protected from later contamination. From the above one can lay down all the necessary rules for the proper handling of his product, and they may be summed up in this advice:

Do not expose milk more than is absolutely necessary. Manifestly some exposure will take place. We not only cannot do as the scientist does, but our object is not to produce sterile milk, but a marketable article that will retain its original properties for a limited period of time. In order to do this we must imitate so far as we can the method of the scientist, and the closer we attain to it the better will be the product. Even when the milk has been exposed there remains a simple and powerful corrective in keeping milk at a low temperature.

The secret of milk preservation lies in these two rules: As little exposure as possible and keeping it at a low

UTILITY AND BEAUTY.

temperature. It should be classed as a piece of good fortune that a food product of such value and widespread use can be maintained by the observance of so few and so simple precautions. If every producer can conduct his business with the knowledge and understanding that the cause of the physical and chemical changes in milk, and consequently its depreciation in value, is the result of exposure to bacterial dirt he will be forewarned and forearmed and much better qualified to work intelligently.

Exposure to bacterial dirt is occasioned by putting milk into unclean vessels, by keeping it uncovered near unclean persons or unclean animals and leaving it uncovered in unclean places. Some exposure must occur in the ordinary routine. So much is granted. But this exposure can be made as slight and as harmless and as short as possible. That is to say, milk in its passage from the cow to the consumer should enter a small number of vessels, the fewer the better. The surface it touches in these vessels should be reduced as much as can be, and the openings in these vessels should be as small as the purpose will allow. Covers should be provided.

Necessary exposure is limited to drawing milk from a clean cow with clean hands into a clean pail in a clean barn. It means straining in a clean room into a clean receiving can. Short exposure means milking quickly, straining quickly, filling vessels quickly and covering them immediately. The exposure which has resulted can be offset by cooling the milk and maintaining it at a low temperature.

The cooling of milk should be done within one hour and, if possible, immediately after being drawn from the cow. Making all due allowance for the action of the bacterial substance in milk, this is the safest procedure. This quick and continued cooling is absolutely essential for milk destined for the cities, because, as a rule, it is twelve to thirty-six hours old when delivered.

**Notes of the Hog Lot.**

Feed the pigs all they will eat up clean three times a day.

The hard cold ashes can be dumped into the hogpen to good advantage.

The amount of pork produced from the droppings increases with the age of the cattle.

The wise feeding of corn to the hogs will give you better profits by extra rapid growth.

The smell from the hogs indicates pretty accurately the lack of thrift of the farmer.

Hogs like to root because it's the nature of the beast. They're built that way. Why not give them the chance?

The sow pigs should be gone over and selections made for future breeders. Pick only the biggest and most thrifty looking.

**Forage Crops.**

One of the greatest wastes in the feeding of hogs is the use of corn. Corn alone is not a good feed, because it is not a balanced ration. No hog grower can afford not to grow plenty of forage crops.

**Nourishing Feed.**

Good, nourishing feed is a necessity for the farm animals, and dry beds are essential to their well being.

**Let Up on the Feed.**

With the lightning of the work lighten up on the feed ration for the horse.

**Patients Received.**

Persons needing hospital accommodations can find them at my home. I am prepared to care for patients, or patients may employ their own nurses. Maternity cases may expect special attention.

## SENSATIONAL BASEBALL.

A Triple Play Made by the White Sox at Detroit.

The most sensational play ever made? Every fan will give a different answer to this question. Some will say that Chase made it when he saved a game by racing into the middle of the diamond on a pop fly, reaching the ball when it was only a few inches from the grass. Ed Walsh, the Chicago White Sox pitcher, thinks it was made at Detroit two years ago.

It happened in the game in which Walsh broke the Detroit hoodoo. The Tigers had beaten Walsh every time he faced them. They regarded him as their lawful prey. The game was played in Detroit, and Mullin, who started this season with eleven straight victories for the Tigers, was strait to pitch against Walsh.

Early in the contest George Davis, the veteran shortstop of the Chicago club, secured the only hit made off Mullin, and it was enough to win the game. The ball, driven down the first base line into right field, struck a fire hose lying in the grass and bounded into the bleachers for a home run. After that Mullin was invincible.

Toward the end of the game Detroit opened with the usual rally. Rossman, Detroit's first baseman, leading off in the last inning, smashed the ball against the fence for a clean triple. "Dutch" Schaefer drew a base on balls. Schmidt, next at bat, gave the hit and run sign and, with both runners in motion, hit a hard bouncer down toward third base, where Farnhill of Chicago was playing. Farnhill made a perfect stop and threw the ball to the plate twenty feet ahead of Rossman, who, seeing that he was caught, doubled back on the line, hoping to dodge the tag long enough to allow Schaefer to reach third.

Sullivan raced down the line with the ball, driving Rossman before him. Rossman slipped and fell close to third base, and just as Sullivan tagged him for the first out Schaefer slid to third. In the meantime Schmidt, a slow runner because of an injury to his ankle, had rounded first base and was well on his way to second. Sullivan straightened up and whipped the ball to Robe, who was covering second base and calling for the throw.

As Schmidt slid Robe's arm came down with a thump, and Schmidt made the second out. The instant Sullivan threw the ball Schaefer was on his feet and dashing home from third base. The plate had been left unprotected. Sullivan was down near third base. Walsh, the pitcher, yelled for the ball and raced Schaefer to the rubber, closely followed by George Davis. The two runners collided in front of the plate.

Walsh was stunned and Schaefer was thrown ten feet from the plate, alighting on his shoulders. Davis, who arrived about the same time, took the throw and dropped the ball on the struggling Tiger, completing the third out and the most sensational triple play ever made in the big league.—Outing Magazine.

**The Indiana Farmer.**

Ex-Governor W. T. Durbin of Indiana sent the following extract from the Marion Chronicle to a friend who had good naturedly "poked fun" at Indiana: "The census bulletins show that Indiana raised enough grain last year to supply every family in the United States with about fifteen bushels. The corn alone sold for enough to give every family in Indiana \$200 if the proceeds were divided on a per capita basis, which they were not. There are 7,000,000 head of stock on the farms of Indiana, enough to form a continuous procession of animals marching ten abreast reaching from Marion 200 miles into the Atlantic beyond Cape Cod if that were thought advisable to go that far. Great is the Indiana farmer!"

**Shaw Would Be Censor.**

Bernard Shaw is himself again. After a relatively long period of silence he has written a column and a half letter on the vexed question of the censorship. Shaw is more strongly convinced than ever that the censorship should be abolished, but he concludes:

"If the nation still clings madly to the ideal censor—climaxed for by so many witnesses—a man of the world, a man of culture, brains, public experience, sympathy with literature and art, of some knowledge of the French and German drama—why not make me censor? I throw off my natural modesty so far as to challenge George Edwards to name any living real, ideal person with on the whole, a better equipment. At all events, if there is a better man name him.—London Cable to New York Times.

**Our Flag Abroad.**

A patent medicine concern in Hamburg, Germany, is sending through the mails and publishing in the illustrated papers a picture showing Commander Peary and Dr. Cook in arctic costume jointly planting the American flag at the north pole. The picture is remarkable for the flag, which has eighty stars and twenty-one stripes, eleven red and ten white, with the legend under the group, "America triumphs at the pole, but we have discovered" (the remedy).

**The Hebrew Sabbath.**

The attempts made by English and Russian reformers to transfer the Sabbath to Sunday, says the Hebrew Standard, remind us of one of Lincoln's stories. A schoolboy was asked by a visitor: "Suppose we call the cow's tail a leg. How many legs would the cow have?" "Five," was the boy's prompt reply. "Wrong," said the questioner. "Calling a cow's tail a leg does not make it a leg."

**Wood Wanted.**

I am hereby directed by the County Court of Crook county, Oregon, to advertise for 100 cords of good solid lumber or body pine cordwood, to be delivered and piled for measurement as follows: 100 cords at the rear of the court house building and cords on the high school lot, entire amount to be delivered on or prior to September 1, 1914. Court reserves right to reject any or all bids. Bids must be filed with county clerk on or before 6 p. m. of August 25, 1914.

WARREN BROWN county clerk.

# ADAMSON'S DIGESTO

is intended for use in cases of

## Indigestion, Dyspepsia, Gas on Stomach, Heartburn, Sourness, Excessive Acid and other forms of Stomach Trouble

DIGESTO is not intended as a cure-all, but is a simple, harmless preparation as everyone will know after reading the formula on each box. Digesto is composed of

**PAIN.** Having physiological actions resembling Pepsin converting proteids into soluble peptones and stimulating the gastric glands.

**PANCREATIN** digests eggs, milk and meats, converting them into peptones for assimilation; with the aid of an alkali it emulsifies fats and oils.

**PEPSIN** is one of the highest digestives approved by the U. S. Pharmacopoeia. Pepsin's chief use is to aid weak digestion and is invaluable in atonic dyspepsia, following acute diseases. Pepsin acts as a stimulant to the gastric glands and promotes their functions and energy.

**PO COMPOUND PEPIN N. F.** forming a compound in itself of digestive and stomach stimulant, assisting the other digestives in their work.

**MAGNESIA CALCIUM** is antacid and laxative and is much used in dyspepsia, sick headache, gout and other complaints attended with sour stomach and constipation.

**AROMATIC POWDERS** are stimulant carminative in cases of enfeebled digestion and flatulency.

**CASCARA SAGRADA**, one of the most widely used drugs in treatment of constipation. It produces natural motions of the bowels by its tonic action upon the intestinal glands, increasing peristalsis. It is also a hepatic tonic in congested liver.

**GINGER** is a valuable carminative to stimulate the stomach, improve the appetite, relieve flatulency and colic.

**DIGESTO** also contains sodium Bicarbonate, Glucose, and is flavored with Oil of Peppermint to allay nausea and relieve spasmodic pains of the stomach and bowels.

**EAT, DRINK and enjoy life** by taking DIGESTO and relieving yourself of stomach misery.

**EAT PLENTY** of wholesome food, DIGESTO will digest it for you, restoring your stomach and intestines to good working order and your general health will usually take care of itself. Hundreds of thousands of people are getting through this world unfit for the duties or pleasures of life, a misery to themselves and a burden to others. They suffer constantly from distress after eating, loss of sleep and mental depression and all because of the failure of the stomach to properly digest their food.

**WHAT FOOD MEANS TO THE BODY.** Food is just so much matter added to the system as to make it necessary to replace that which is constantly used for the existence of the body. Food is the fuel necessary to supply the working power of any person in order to attain results, for he it known that no half-fed body can be restored by depriving it of the necessities of life.

**HOW TO OBTAIN "DIGESTO" OF YOUR DRUGGIST.**

DIGESTO tablets are for sale generally in the drug stores, but if your druggist does not happen to have them in stock, if you ask him to do so he will send and get DIGESTO for you, and by keeping DIGESTO in stock where you and your friends can get it at any time, will do me a great favor, and at the same time be a great convenience for you by saving delay and expense of correspondence. However, if your druggist will not get it for you, I will send a box of DIGESTO, postpaid on receipt of price, 50 Cents a Box, or Six Boxes for \$2.50.
