The Place to Save Money

THE LEADER

The Place to Save Money

We have just received a new lot of

American Lady Corsets

We have them in all shapes. Snug hip like illustration for medium and well developed figures; Medium High Bust, long hip back and front. Reluforced at the walst line with a patented belt which renders the corset unbreakable. Has a special heavy graduated front clasp. Material Canntil White and Drab; hose supporters front and white

Your Moneys Worth or Your Money Back

Thats the proposition we make to every customer of our store, and our word is our bond. Do you know of a safer investment or a safer place to trade. We have repeatedly stated that we do not consider a transaction closed until you are satisfied, and we stand ready to make this good at any time. We want you to tell us when anything goes wrong with goods you buy here. Do you suppose that we would make such an offer unless we knew our goods were dependable. We also carry a full line of General Merchandise.

COAL MADE FROM PEAT.

Handiwork of Nature Reproduced by Artificial Process.

Peat is partly developed coal. Na-ture has failed to impart that enormous pressure arising from the decayed vegetable substance which is gresses very fast. necessary to compress it into a hard material, nor has it been carbonized and the water eliminated by the interior heat of the earth, says the Chicago Record. A natural upheaval whereby the peat bogs were buried under immonse accumulations of rock and soil would achieve this end. If, therefore, one could reproduce the cycle of operations carried out by nature, compress the peat and drive off the water by a stendy heat, coul would be the result.

Dr. Martin Ekenberg, a well known Swedish scientist, after many years' research and ceaseless experiments has apparently solved the problem and has produced at the manufactory erected peat fuel which in appearance, combustibility and heat raising properties compares favorably with cont.

By minute study of the natural evolution be has succeeded in perfecting an artificial process the fundamental characteristics of which are the elimination of the water by heat and the application of pressure by mechanical

Hituminating gas can also be easily coal. The process is the same as that adopted for the manufacture of gas tilled in a dry retort, and the volatile constituents are secured, scrubbed, washed and dried in the usual way. while the ordinary byproducts are also

The gas has a high illuminating intensity, comparing favorably with coal gas, while the coke residue is superior to that resulting from conf distillation owing to its low sniphur percentage. This coke is eminently adapted to metallurgical processes. And it can also siderable extent, with the advantage of being much cheaper.

Prineville is coming to Itself in the the matter of public improvement and cleanliness. Some time ago the land, and in large quantities, council took action to have the filled and a crew of six teams has been busy for the past several days hauling from the steep hillside north who says that it will be pushed uatil all that part of the city is as leavel and clean as the rest of the

C. D. Calbreath has charge of the trams and will add to the number soon if the teams can be lad. A device has been constructed so that the wagons are all loaded by horses posit of soil and rock upon the de- and scrapers and the work pro-

THE BLACK DIAMOND.

Ranks Among the Curiosities of th Mineral Kingdom.

The term "black diamonds" is some times jokingly applied to ordinary coal which we burn in our furnaces, but the real black diamonds of commerce are among the most unique mineral products of the world, and they serve a purpose in the industrial world that makes them of great value. The black Monday afternoon and every hour, diamonds are pure carbon, and yet in no outward appearance resemble the o'clock Tuesday afternoon. At both diamonds which we are accustomed to wear as ornaments, writes George E | ways two days at once, and every day are slightly harder than the crystal or gein diamonds and, in fact, about the hardest substance known.

Black diamonds or carbons are among the greatest curiosities of the mineral kingdom. They are without crystalline form and are found in irregular pieces ranging in size from half a carat up to three, four and five hundred carats. They are dark gray, black or brownish in color and opaque. The real diamond of the jewelry trade is also pure carbon, but translucent and crystalline in form. Two objects so alike in composition could not be found so opposite in appearance as these two forms of carbon

Another peculiar thing about the black diamonds is that they are found only in one locality in the world. They come from a very small section in Brazil not more than 225 miles sonare in area. Outside of this limited territory no pure black diamonds have ever been found. In the Brazilian black diamond fields the natives dive in the river beds for them and recover them from the gravel and washings of the

in this section of the world and no Wool Prices Not where else is one of the mysteries which science has falled to explain None of them has been found in the great Kimberley diamond regions, where the crystal form of diamonds have for so long been mined, and likewise no fine specimens of the gem dis-mond have been found in the Brazilian

ELEVATOR IS ANCIENT.

Evidence That Old Rome Made Use of Mechanical Lifts.

Professor Boul is reported to have de an important discovery in the sar he found in twelve small rooms or more than 15 cents. galleries traces of a former system of elevators.

In each room there are unmistakable traces of grooves through which ropes passed and stone supports for wooden poles that were fixed vertically inside the passages. The professor is con-vinced that platforms installed in these rooms served to raise to the surface the or lifts. Thus what until recently was considered a modern invention was used by the Romans under the repub-lic. There are no traces of similar elevators in buildings belonging to the imperial period, and in all likelihood no attempt was made to improve the movable platforms in later times.

A Land of Plenty. Sunny Sinaloa extends for 400 miles

long the eastern shore of the gulf of California and the Pacific ocean, with an average breadth of 100 miles, covering an area of 35,721 square miles. About 1,000 mining titles are registered. The whole country is intersected by rivers and streamlets, and on every

time of his discovery it was 2-in the applies. So does the time of every other meridian, and in consequer the same instant it was also 7 o'clock minute and second in between until 7

New Cod Fishing Bank Discovered. A new "cod bank" has been discovered in the gulf of St. Lawrence, off the west coast of Newfoundland, by the Canadian government survey ship Ellnor. The new bank is said to be situated about twenty-five miles northwest from Port Riche (the northwest point of ingornachoix bay) and is reported to be about twenty-eight miles long and ten to twelve miles wide. The least depth of water over the bank is said to be about eighteen fathoms. Cod are reported to be in abundance. TELEPHONE OUTDONE.

The Dictograph Transmits Slightest Sound Perfectly.

Many of the imperfections of the telephone seem to have been overcor by another invention which is quite as remarkable as the telephone was in its early days. In many respects it is more wonderful. The inventor calls it the dictograph, part of the name indicating exactly what it will do, for it will talk when spoken to. There is nothing in its operation to suggest writing, as the latter part of the name would indi-

The dictograph is an inconspicuous The dictograph is an inconspictious liftle box some 6 by 11 inches in size. Which may be placed anywhere on the desk and which catches the alightest whisper as well as the ordinary tone of voice within a radius of fifteen size with proper vouchers to the undersigned state are hereby notified to present the same with proper vouchers to the undersigned and estate are hereby notified to present the same with proper vouchers to the undersigned and the control of the state of Oregon within feet or more, and it transmits the exact words and tone to any other office and to any other person with perfect distinctness. The box has two circular openings in its face, one of which might be called the car and the other

receiver to the ear, as with the telephone. Still, the enunciation is perfect. The master of the business may sit at his desk to carry on a conversation or walk about the room and even stand with his back to the instrument. It will still serve him faithfully. It is said to be more sensitive than the tympanum of the ear, since it will receive and transmit a whisper which the ordinary ear will not understand.

A Discovery In Dentistry. An electric current from artificial teeth has been reported by a British dental authority. Pain in the patient's tongue had puzzled doctor and dentist, when an electrician, to whom the mat-ter was casually mentioned, examined the teeth, finding that they were fixed to the composition plate by two met-als. A galvanometer test showed that these metals, moistened by the saliva. generated a current strong enough to cause ulceration and severe pain.

Satisfactory

by rivers and streamlets, and on every hand are reservoir sites.

The soil is even richer than the soil of California, and fertilizers are unsknown. Sugar matures in about a year and yields from twenty to thirty tons an acre. Wheat is sown between November and January and harvested in May, the crop averaging twenty bushels. Alfalfa is cut five or six times a year, giving about ten tons an acre. Barley, sown from November to December and harvested in May, yields fifty to sixty bushels. Oats are sown in February and harvested in June and yield fifty to seventy bushels an acre.—Chicago Tribune.

Time at the Poles.

Time is a curious freak at the earth's poles, and when Dr. Cook says that he reached there at 7 o'clock in the morning of Tuesday. April 21, 1008, his statement is without certain meaning. Presumably he carried Greenwich time, in which tables for navigation are calculated. So at the morning at New York. As this me-Administrator's Sale of Real Property.
