Meteors.

There is one very interesting fact connected with meteors that have struck the earth. Hundreds of them have been examined and found to contain animal remains—that is, the very lowest forms of life. This indicates that they are parts of a world that burst into fragments long ago. What a thought—a world broken up and scattered through space! Maybe we had another moon once, but that broke into pieces and these are the pieces, and maybe they are parts of the planet that once revolved between Mars and Jupiter. Over 500 of the larger pieces of this planet have been discovered and catalogued. One of these flew away inside of Mars' orbit. Why may not many of the smaller pieces and these solid meteors be they? It is probably so.—Columbus Journal.
