School Supervisor's Monthly Report

School boards should begin to plan for their fall terms. In the districts where school is out it would be a good thing to remove the sage brush from the grounds, repair the buildings and put things in readiness for the reopening of school.

Willow creek is going to build an up-to-date schoolhouse during the summer.

Miss Gray closed a successful term at Lamonta, Friday, March 29. She has taken charge of the Tetherow Butte school for the spring term.

A number of Crook county teachers are planning to take a course in the Summer Normal. It is an excellent way to spend a part of the vacation.

The doors of a number of school buildings still open inward and several districts have no flag. These matters should be attended to by the school boards.

Parents are cordially invited to visit the schools. It encourages both pupils and teachers to have the parents take a friendly interest in the work.

Arbor Day will soon be here. Make use of the opportunity to beautify your school grounds. A half day spent in cleaning up the premises will be a big boost for your district.

Number of schools visited, 23.
Number of miles traveled, 346.
Number of schools using sanitary drinking cups, 23.
Number of schools having flags, 10.
Number of schools displaying flags, 7.
Number of schools having grounds fenced, 3.

Investigate Page Fencing

We Have a Full Car Load of Page Wire Fencing

Made up of Field, Hog, Rabbit and Poultry Styles.

No. 1028—10 wires—28 inches high, and No. 1134—11 wires—34 inches high. These are especially adapted for Hogs.

No. 1736—17 wires—36 inches high. For Poultry and Rabbits.

No. 2048—20 wires—48 inches high. For Poultry and Rabbits.

No. 942—9 wires—42 inches high. For Hog and Field.

No. 1345—13 wires—45 inches high. For Hog and Field.

No. 1741—13 wires—41 inches high. For general use.

No. 1148—11 wires—48 inches high. For heavy field use.

PAGE fence is only one of the hundred or more styles that are now on the market.

PAGE fence is the one generally in use in Eastern states, in the Willamette Valley, Southern Oregon and Klickitat Valley where fences have been tried out during the last twenty years.

To the man who does not know, one fence is as good as another—that's why in a new country you find all kinds of fence.

Ask the man who knows and he will always recommend the PAGE.

There is a reason. PAGE is an independent maker. PAGE makes his own wire, galvanizes his own wire, weaves his own fence. WE BUY DIRECT FROM PAGE—no jobber—no middle men—JUST PAGE AND US.

Now take that No. 1028 10 inch hog fence. Small wires but it stands more than 11,000 pounds strain. No. 1347 will stand up against more than 25,000 pounds, while the heavier fences will likewise stand more than any other fence of their weight.

PAGE is the only fence we know of that is made of Basic O. H. process—that's why it stands one third more than other fences.

Other fences must have six inch stays for hogs because it will not stand the strain, and must have posts eight to 16 feet apart.

PAGE says: "do not put posts closer than 24 feet." In field fencing he recommends post not closer than 30 feet with stays between.

Don't think you are getting a bargain if you get a fence at a "cheap" figure. Page fence stands. Will not sag, can and should be stretched tighter than other fence.

We make delivery at the railroad. Write to us or phone and we will tell you more about PAGE.
