Soils rebel when crop after crop is taken from them, without return of fertilizer. Return every bit of manure to the soil. The IHC manure spreader will save you much disagreeable hard labor, will spread evenly, and will make one ton go as far as two tons spread by hand.

are built to suit you, to do best work for the buyer in every case, to convince him that he has made the wisest purchase. Every detail in the construction has a purpose, for which it was made after thorough tests and experiment. They have the maximum of strength and endurance.

You will find all styles and sizes in the IHC with a light or heavy coat, as you choose, but always evenly, up hill or down. There are high and low machines, with steel frames, endless or reverse aprons, but always giving best possible service. Tractive power is assured by position of the rear wheels well under the box, carrying nearly three-fourths of the load. Study the I H C spreader line at the local
