## Five Solid Reasons

**I H C** manure spreaders are these, in the words of a farmer who has devoted much time to correct soil-feeding. 1. It saves disagreeable and hard work. 2. It pulverizes and mixes the manure mass. 3. It distributes manure evenly over the field, insuring a good, even stand of grain. 4. It prevents loss of nitrogen through fermentation or leaching in the pile when manure is hauled directly from the stable. 5. Indirectly, the ease with which it can be handled encourages the owner to care for the manure and distribute it on the fields carefully instead of wasting it.

## I H C Manure Spreaders

will work uncomplainingly for years making profits for the owners. You will find them all styles and sizes, high and low, endless apron or reverse.

I H C manure spreaders are exceedingly durable, strong, correctly built to stand all conditions and all strains they may meet. Each feature has its purpose. Up hill or down or cutting corners, they spread all kinds of manure evenly, in a light or heavy coat at the will of the driver. The beater drive is strong and simple, beater teeth are square and chisel pointed to pulverize the manure, and the large diameter of the beater prevents winding. The rear axle, carrying a large percentage of the load, insures ample tractive power.
