The commissioner said there had been no definite determination as to the method of opening, but in about two weeks the question will be settled. ### Best-Hated of Farm Tasks

**I**n the spreaderless farm the thought of the great heaps of manure piling up constantly in barn yards, stables, and stalls, is a gloomy one. Those piles mean much disagreeable and hard work. It must all be loaded on high wagons. It must be raked off in piles in the fields. Then every forkful must be shaken apart and spread.

Compare that old-fashioned method with the I H C spreader way. You pitch the manure into the spreader box, only waist high, drive out and—the machine does all the rest. And it spreads evenly and far less wastefully.

### I H C Manure Spreaders

are farm necessities. The man who uses one will get the price of it back in increased crops before its newness has worn off.

Every detail and feature counts. They do best work always and stand every strain for years. They are made in all styles and sizes, for small farms and large, low and high machines, frames of braced and trussed steel. Uphill or down, or on the level, the apron drive assures even spreading, and the covering of corners is assured by rear axle differentials. In all styles the rear axle is placed so that it carries near three-fourths of the load. This, with the wide-rimmed wheels with Z-shaped lugs, makes for plenty of tractive power. Winding of the beater is prevented by large diameter and the beater teeth are long, strong and chisel pointed.

The I H C spreader lines will interest you. See them at the local dealer's. Get catalogues from him, or write us.
