

USE OF STARTERS IN BUTTER MAKING

"The chief value of starters, which are almost indispensable to makers of large amounts of butter and cheese," says W. L. Clevenger of the Ohio College of Agriculture, "lies in the fact that in these cultures are found a reliable source of souring bacteria, which, when properly used, insure a more uniform quality of butter and cheese. A starter is simply sour milk which contains a large number of desirable souring bacteria in the growing stage. It will have a mild, acid odor, and when added to pasteurized cream at the right time will insure a uniform, excellently flavored butter."

Much more interest is being taken by dairymen in possessing themselves of better breeding stock. No doubt this is because of the advanced registry of the breeds. These records are of very great benefit in this respect. A cow with a record of production for milk and butter can show almost exactly just what profit she will produce through the milk pail for one year. Crown Princess Maxie De Kol II, here shown, is a pure bred Holstein and is owned by G. W. Rising, Fayette, O. Her records as a senior four-year-old are for seven days 26.77 pounds of butter and for thirty days 142.27 pounds of butter.

uniform in flavor and quality from season to season, says Orange Judd Farmer. This is due to an excess of undesirable bacteria, which produce bad flavors and prevent the proper souring. This condition can be overcome in many cases by the use of natural starters, which simply means the adding of a culture which is known to contain the proper bacteria for souring to the cream in which cultures of unknown bacteria have been growing. A natural starter can be made by putting clean milk fresh from the cow in a sterilized jar and letting it stand at 70 degrees until it thickens, which is usually from twenty-four to thirty-six hours. This permits the lactic acid bacteria, which are naturally more numerous in the milk, to develop under the most favorable conditions. This culture should be added to the cream twelve hours previous to churning in quantity varying with the size of the churning and mixed thoroughly.

SAVING THE LAMBS.

Guard the New Barn Youngsters Against Cramp and Cold.

If your ewes were in good order in the fall they should still carry very good flesh, writes a West Virginia farmer in the National Stockman. They should now be turned on a reserved sod handy to an open front shed, with plenty of hay in the racks. Sprinkle some salt on the hay occasionally. Should have a fresh cow on hand. With her you can save lambs that would otherwise die. Watch your ewes and, if not giving enough milk for lambs, feed them twice a day warm milk just from the cow. If you find one that has become chilled by cold wind, rain or neglect of the ewe, get him near the fire, give his legs and body a good rubbing with a woolen cloth, heat the cloth, wrap him up and lay him before the fire for a few minutes. Soon he will shake himself and give the hunger signal; then feed him, either by way of the ewe or the cow. Sometimes a lamb will apparently lose the use of his legs and refuse to stand and his head will draw to one side. This is a sign of cramps in the stomach. Give oil physic, dose same as for child.

I have handled sheep and lambs for a number of years, and it was a long time before I got acquainted with the cramping part. For several years I considered him the same as dead and let him go, but now I do them and save nine cases out of ten. This may seem some trouble, but it is only the work of a few minutes and saves \$4 or \$5.

The Lambless Ewe.

If a ewe loses her lamb she should be required to mother a lamb of another ewe that has twins or is unable to supply her lamb with enough milk. Many ewes can be induced to adopt a lamb if time and patience is exercised. Remove the skin from her own dead lamb and place it on the lamb to be adopted by her. Since she knows her lamb by the odor and not by sight this method will be effective in many cases. The old skin may be removed in a day or two.

Rye For Pigs.

It may not be generally known, but ground rye forms a very good substitute for corn. Pigs do not seem to relish it as much nor is it considered quite as good, pound for pound, but for general fattening purposes it can take the place of corn to good advantage. If used in the following ratio it makes an excellent feed: Eight parts of corn, three parts of ground rye and one part of tankage.
