

National Defense and International Peace

★ ★ ★ ★ ★ ★ ★ ★
Are You Ready to Play Your Part?

THE power of a nation in time of need is the producing power of her industries. America must find out what this producing power is and then develop it. The capacity of every plant must be gauged. The ability of every man must be known. For War is Mechanical. It is Electrical. It is Chemical. It is Mining, Manufacturing, Transportation. It is EVERY phase of Engineering fused into a single industry—

"THE NATION'S DEFENSE."
Thirty thousand Engineers today are serving YOUR COUNTRY without pay. They are making a survey of YOUR COUNTRY'S Industrial Resources. They are helping YOUR COUNTRY TO FIND ITSELF—and You! They are charting the channels of commerce. Sounding each source of supply. So that, should the Day break when War must come—YOUR ARMIES in the field will be but the crest of a Wave of Industry, as wide as the American Continent and as deep as the American Soul. That YOUR COUNTRY may know what the Engineers are doing, the Associated Advertising Clubs of the World have pledged their services to the President of the United States. And this advertisement, published free by this paper, is part of a nation-wide series to secure YOUR co-operation with the Engineers. **"WHAT CAN I DO?"**

This is, doubtless, the question you are asking yourself. Here is the answer: If you are a manufacturer co-operate fully with the Engineers so they can do their job quickly and efficiently. If you are a working man help your employer to help the Engineers and be prepared, if so needed, to be a Soldier in Industry, behind the firing line, which is just as important as being a soldier on the firing line. If you are a business man or a professional man, or whoever you are, help mobilize "GOOD WILL" behind this patriotic task of the Engineers in behalf of National Defense and International Peace.

FILLING THE BILL.

The real institutions, the successful movements and the enduring inventions are the result of an actual demand and are usually an evolution that is little less than marvelous.

Such is the public school system of the present day, the penny newspaper, the ten cent magazine and the standardized country weekly which is being recognized more and more as a power in the up-building of a community.

These things have developed just because there was a crying need in the lives of the American people for them.

They have been copied more or less successfully in the other countries of the world, and in a few instances improved upon, or at least varied to meet the local conditions of the country in which they are located.

Of a more recent dating however we find the Chautauqua and the county high school system. Before the days of Senator Kuykendall who is the father of the high school law, the need of such an institution was strongly felt by the people of this part of the state. Repeated attempts were made by parents of children who had graduated from the grades to establish a local school of a semi private nature, after they had sent these same young people to other schools outside of the county with unsatisfactory results.

When the high school bill became a law, Crook was one of the first counties in the state to take action to avail herself of the new measure and as usual, many of the local people predicted dire failure. Such a thing would be impossible, and would be an unbearable burden on the taxpayer they declared.

The institution of course speaks for itself.

There is none better in the state. That it has been a great success is due to two things. The great need for the school and the fact that the board has spared no pains to support the school as it should be at all times. Everyone has helped, and anyone who questions the need or the efficiency of the school at this time does so at his own peril.

TEN COMMANDMENTS FOR CLEAN UP CAMPAIGN.

LOVE your neighbor's lot as you do your own, but be sure to love your own.

Don't plant tomato cans and rubbish on unused land. Their fruits are withered civic pride.

Don't allow yourself or your city to create dumps. Waste can be made to pay for its own destruction at a profit.

Don't allow tumbled down buildings to stand on valuable land. They are financially wasteful. They create filth, invite vice and are a menace to life.

A fence that has ceased to be a fence and has become an offense should be repaired or destroyed.

Unregulated advertising on unused land pays for the maintenance of a public nuisance.

Two gardens may grow where one dump has bloomed before.

School gardens are valuable adjuncts to education and recreation. They can be cultivated on an open lot.

Let the children play on the unused land, so they may become strong and keep out of the hands of the law.

Let not an inch of land be kept in idleness. It has a divine right to bear fruit and flowers and ever serve the highest interest of man.

INTERNATIONAL HARVESTER MACHINES

McCormick Elevators Turn the Trick

DID you ever go into a field of grain where one side was tall, heavy, and perhaps lodged? Then on the other side find the stand thin, short, and over-ripe? It's a pretty hard matter to set your binder so it will take care of such conditions without loss from shelling or without clogging, isn't it? Here is where a McCormick binder proves its true worth.

The McCormick has an Elevator that Floats at Four Points

This means that if the grain is thick, tangled, and matted, the upper elevator will expand to allow the increased volume to pass through, and then drop back to its original position for short, thin grain. There are no changes or adjustments to make—the movement is entirely automatic. Come in and see how simple this valuable feature is.
