

Test Us On This!

Even if the war and speculation have sent the price of wheat up we still carry our usual line of flour.

Best grades.

Test us on this and other things.

Orders carefully filled.

MRS. I. MICHEL

I EAT ALL I WANT NOW AND FEEL FINE!

No More Gas on the Stomach or Sour Stomach! No More Heavy Feeling After Meals or Constipation!

If you have sour stomach, constipation or gas on the stomach try JUST ONE SPOONFUL simple buckthorn bark, glycerine, etc., as mixed in Adler-Lika, the MOST POWERFUL bowel cleanser ever sold.

The VERY FIRST dose shows results and a short treatment with Adler-Lika will surprise you.

It drains such astonishing amounts of old matter from the system that A SINGLE DOSE relieves constipation, sour stomach and gas almost INSTANTLY. A dose twice a week guards against appendicitis.

Prineville Drug Co., George Nicolai, Pharmacist

PROSPEROUS FARMERS IN ALFALFA COUNTRY

The topography of the Alfalfa country differs from others, in that it is comparatively level and free, for a larger part, from rocky knolls, thus making ideal fields for irrigation. The soil is very deep and is especially adapted to alfalfa growing.

A. O. Walker, who owns the Alfalfa Valley Farm, was one of the first settlers, planted the first field of alfalfa and gave the present name to the post office, which he had at that time. Mr. Walker is a college man who brought his family to this section for a home, and with eighty acres has demonstrated that money can be made on a small farm.

He states that a settler now has the advantage in knowing what to specialize in, while at the beginning several years were lost in finding the profitable crop to raise. Mr. Walker is an irrigation expert.

W. E. Guerin has the management of a 320 tract of land, chiefly in alfalfa, which shows the results of careful seeding. Alfalfa bacteria was obtained from the state and mixed with the seed before sowing. This bacteria is absolutely essential in the growth of alfalfa and should be used in restoring old fields to their highest production.

The Johnson ranch, of 1120 acres is showing improvement under the supervision of F. F. Hafner. This parcel of land is practically all cleared and cultivatable, which under a colonization scheme would support at least a dozen families.

C. H. Hardy runs a dairy on his 120 acres and allows no manure to be wasted, which is probably one of the reasons that over three tons of alfalfa per acre was produced last year.

The alfalfa in this section is retarded because of the cold weather which is true throughout the county.

The hay raised last season by these farmers was fed on their ranches to the Williamson, Mayfield and Millican stock, which gave valuable returns to their lands.

There will be a celebration at the Alfalfa ball park for those who will not be able to go elsewhere. There will be exercises and speaking, races and contests of all kinds, with a dance in the evening.

Mrs. H. Stroud Dies After Long Illness

Mrs. H. Stroud, who has been ill for the past year, died at her home in this city Monday morning. Funeral services were held from the Christian church on Tuesday at 2:30.

Mrs. Stroud was born in Benton county 67 years ago, and has been a resident of the state all her life.

She came to this county in 1882 and has lived since that time, in or near this city. Her health has been failing for several months, and she was taken to a Portland hospital some time ago, but failing to regain her health, returned to this city about five weeks ago, and has been critically ill since that time.

She is survived by six sons and a daughter.

HEAVY RAINS INSURE CROPS AND RANGES

Central Oregon has been visited by one of the heaviest rains that has been recorded for some time during the past twelve days.

More than 2 inches of precipitation has been recorded by the local observer, .53 of which fell on Monday of this week. This brings the total for the half year to 6.8 inches. This amount is divided over the months as follows: January, 1.7, February .47, March .87, April .5, May 1.13 and June up to the 28th, 2.13. In June 1915 only .4 of an inch fell. The local station is kept by Mrs. W. J. Pancake.

The rains have been largely in the nature of heavy showers which have given this part of the state

twice as much precipitation in the same length of time as has fallen in Portland.

Reports of roads being washed out, freakish tricks of lightning, wind and the elements in general are coming into this office from all quarters.

Five head of cattle have been killed by lightning. Three of these belonged to G. C. Truesdale at Powell Butte, another was killed in Redmond and the fifth at Roberts.

The last mentioned cow was tied to a wagon at the J. E. Warner ranch south of Roberts. The lady of the place was milking when the storm came up and she went to the house. Before reaching shelter however a blinding flash came and looking back she saw the cow fall dead. The calf which was near fell over also but was not killed.

Wind blew over 16 large pine trees at the S. A. Prose place on McKay, and other slight damage is reported.

The benefits however are far greater than damage done. Crops that were suffering for moisture ten days ago have been "made" by the rain, and a yield of the highest quality will no doubt result.

Wheat which was spring sown will make heavy yields and the condition of the creeks and snows in the mountains will insure late water for irrigating all hay crops.

Rader Prewett had the misfortune to have his nose broken by a flying piece of timber last week.

CHIROPRACTIC

YOUR health depends upon the condition of your nervous system. Science has proven that diseases, both acute and chronic, can be remedied by Chiropractic adjustments and without the aid of drugs. Chiropractors have located specific localities for every organ and tissue in the body, thereby having control over diseased parts.

You have tried all other methods without results, give Chiropractic a chance. Especially are chronic cases being successfully treated by competent Chiropractors. Every physician and scientist who investigates Chiropractic says it is logical and in accord with facts.

Cook in a cool Kitchen

All the heat is concentrated where it is needed—keeps you cool and makes for better cooking

NEW PERFECTION OIL COOK-STOVE

Why not cook with a modern oil stove this summer and be comfortable? Bakes, broils, roasts, toasts. More efficient than your wood or coal stove, and costs less to operate.

Better cooking because the long blue chimneys give steadier, more evenly distributed heat, under perfect control—like gas. No smoke or smell. In 1, 2, 3 and 4-burner sizes, ovens separate. Also cabinet models with fireless cooking ovens.

of Caps and Rubbers for all Standard Makes of Fruit Jars

Heavy Castor Machine oil, per gal. 55c

Five Gallon Cans \$1.90

Hay Forks, Steel Cable, Rope, Pulleys, Oil Cans, Assorted Bolts, Wrenches, in fact most everything needed in hay harvest Equipment.

Deering Cutting Machinery

When You buy a DEERING MOWER you have purchased an implement that has been tried to the satisfaction of thousands of farmers. Ask the man who has used it. You cannot afford to experiment at a saving of a few dollars on the cost of a machine at a critical moment. The purchase of a standard mower insures service when service is actually needed and repairs are always obtainable.

Harvest Supplies We make a specialty of filling orders for harvest time and are OFFERING SOME SPECIAL BARGAINS in Canned Goods, Coffee, Syrup, Dried Fruits, Pickles and other commodities.

Irrigation Brings Results

Continued from page 1.

full benefits accruing from such rights.

Furthermore, these storage reservoirs are designed to hold more water than is actually needed in one year on the lands, in order that such surplus or holdover storage may swell the supply at hand during the particularly dry years, when the water supply of the drainage area above the dams runs below the average.

The selection of the reservoir sites was based on surveys made of ten different sites. From these surveys, graphical diagrams were made from which a study of the possibilities of each site could be made. As a result of these studies the most economical site on each stream was easily chosen, and in the end might bring the greatest number of acre feet storage for the least cost or, where the run-off was limited to a certain amount, the storage of that given amount, for the least cost per acre foot of capacity.

The dams to be built will undoubtedly be of the earth fill type constructed by the hydraulic method. These dams are usually built with a puddled clay core, which serves to make the structure impervious to water. They are often built with a corewall of either masonry, timber or sheet steel, but the assurance of safety based on such corewalls is often short lived, inasmuch as any settlement in the dam may rupture the corewall and perhaps defeat the very purpose for which it was designed.

During the San Francisco earthquake at least three dams of this type of construction were in or near the fault plane of the quake, but suffered no damage.

The San Leandro, 125 feet in height, with a puddle corewall, was shaken and not damaged. Another, one and three quarter miles from the fault plane came through equally undamaged, while in the case of another at San Andreas, the fault plane passed across the east end and a crack two to two and one half inches wide extended along the axis of the dam without seriously endangering the safety of the structure.
