AN UP-TO-DATE BAKING POWDER

The world advances. Certain products in certain lines stand still. A typical exponent is baking powder. Practically every brand of baking powder is single acting today, just as it was years ago. The marked exception is Crescent Baking Powder. It is space with progress. It is double acting. It has from 20 to 25 per cent more leavening power than other baking powders. It provides double the assurance against baking failures that single acting baking powders do. It is manufactured under modern conditions which permit a low price—25c a pound.
