HOW CLEOPATRA'S NEEDLEWASSAVED

New Process Invented to Preserve Surface of Monolith in Central Park

HIEROGLYPHS OBLITERATED.

Rigors of Western Climate Caused Khedive's Gift to Disintegrate. Painting Ancient Obeliek With Special Preparation Stayed Decay-Rulned Pertions Restored.

New Yorkers awoke one morning to and in their breakfast beadlines the news that a zealous park employee had discovered signs of disintegration on the surface of the city's most treasured antique-Cleopatra's Needle. Photographs revealed that the monolith was peeling, large pieces of sandstone having fallen from the tall shaft, carrying with them part of the prized hiero-

London's twin sister of Cleopatra's Needle was reported as resting comfortably and enduringly on the banks of the Thames, and the rival port wondered whether a preparation would be found to stay the attacks of their

Such a preparation was soon forth-coming. A new paint combination as a preservative for stone was invented

THE OBELISK.

Final Three Year Proof to establish claim to the land above described, before Lake M. Bech-tell, U. S. Commissioner, at Prinevilla, Oregon, on the 3rd day of May, 1919. by Dr. William Kuckre, chemist of the by Dr. William Kuckre, chemist of the Metropolitan Museum of Art. Many years previous coating with paradin had been tried, but the application had not entirely accomplished its purpose. The new painting process, however, proved a success. Disintegration was halted and the damaged parts restor-ed. New York breathed easily again. Claimant names as witnesses:
David Risrus, James Johnson, Homer Norton, George Knox, all of Post, Oregon.
H. FRANK WOODCOCK,

PAINT PROTECTION

AND ITS ECONOMY.

The preservation of structural meterials, which may be obtained through the application of paint, constitutes a most vital means of furthering the conservation of our natural resources. It is, moreover, the most economical method of sustaining the appearance and general upkeep of any commu-

nity. A structure coated with sheets of India rubber would not be as well protect ed from decay as a structure coated with a good oil paint. This is due to the fact that a sheet of rubber is no so durable or as waterproof as a thin dried film of paint. The latter material when applied dries to a continuous elastic film containing finely divided particles of metallic, wear resisting pigments. A square foot of such a than a penny, yet it will beautify and protect a dollar's worth of surface for many years. This is a low rate of in-

Dwellings, barns, outbuildings, sheds posts, fences, stock enclosures, wagons implements, windmills and other struc tures, whether of wood, fron or cement, should be preserved, through the use of paint, from rapid decay. High grade paint may be used successfully for all such purposes. Colored paints will be found the most seviceable, the coloring matter in the paint adding from two to three years to the life of the coating

QUESTIONNAIRE

ANSWERS WHICH WILL SOLVE PERPLEXING PROBLEMS OF THIS RECONSTRUCTION ERA.

Query.—The government has launched an educational campaign to encourage building in order to put more men to work. Would not a similar movement to show how the old structures can be best and most connemically repaired and made good as new also help?

Answer,—It is learned that such a plan is in effect and is linked directly with the Washington propagands.

Industry must be turned back from works of war to the ways of peace. Employment must be found, in the meanwhile, for those whose occupation has been interrupted. There is no real surplus of labor in the United States. Rather there is a shortage, which would be acute if normal condiditions were already restored, and one step towards restoring them will come with resumption of repair work.

Government restrictions, imposed by the necessities of the war program, have for many months past retarded or altogether prevented construction. improvement and repairs. These restrictions are now off, and there is scarcely a towa, a city, a factory, a dwelling or a farm that does not reveal a crying need for prompt attention. Nothing delays such instant action except the feeling that prices are high for the time being and may be lower.

That is not logical. No matter what it costs to repair, the cost is less than the cost of neglect. No matter what the cost of paint, the wind and the weather will collect a higher bill in deterioration and decay.

Query.—What do you think of point as an investment, aside from the appearance it leads? Does it really PAY to paint a house regularly, say, every three or four years?

Answer,-Good paint properly applied when needed is the main thing in naking a house last long and well. A ouse worth \$2,500 can be painted at a cost of about \$125. In 60 years that house will need about 15 paintings, the total cost of which will be \$1,885. Left without paint, such a house would fall into complete ruin in 30 years. Se taking 80 years as a basis for our figures we find that with paint a home will last that time in good condition and will cost, plus paint, \$4,875. With-out paint the house would have to be out paint the house would have to be rebuilt at the end of 80 years and would be ready for another complete renovation when the sixtieth year arrived. Cost, without paint, 85,000 for a home ready to fall to pieces. Does regular painting pay? As the eld Dutch adage says:

PAINT PAYS FOR ITSELF."

Answer.—On ne account should eld
paint which has become fat be used
for priming either old or new work.
Old paint in that condition is best used
as a fence, brickwork or tinwork. If
you value your bars sufficiently to
paint it, do it the justice of a good job.

U. S. Invents Anti-Rust "Dopo." Incident to the war, the government has faced the problem that has so long proved baffling to commercial concerns of protecting from and steel from rust. In an attempt to solve this federal specialists have perfected various forms of protective coatings. In this connection it may be pertinent to ask whether commercial uses will not be found also for the so-called "dopes" which the government has invested to be applied to airplane wings and which are possessed of valuable weather-resisting and firepreof qualities.

EFFECT OF COLOR UPON THE DURABILITY OF PAINT,

Property owners who may have un-der consideration the painting of dwellings and other structures should remember that more durable results are obtained when tinted paints are need. Permanent coloring materials which have been ground by machine into a high grade white paint base have the effect of preventing "chalking" and "checking," two defects which are often observed when white paints are used.

Is Your Money Supporting the Government?

At this critical period in our history our manufacturers are offering their mills and our young men are offering their services to the United States government. Would you like to do your share and help, by putting your money where it will support the new Federal Reserve Banking System, which the government has established to stand back of our commerce, industry and agriculture?

You can do this by opening an account with as as part of every dollar so deposited goes directly into the new system, where it will always be ready for you when wanted.
